## Instructions for S801+ Soft Starter, S801+N... and S801 + R...

The Soft Starter features an electronic motor overload protection feature. This is intended to protect the motor and power wiring against overheating caused by excessive current for extended periods of time.
Note: Short circuit protection must be applied on the line side of this soft starter.
Trip current is programmed by entering the motor full load current rating using the "FLA Current Adjust" dial. It is programmable from 32\% to 100\% (.32-1 adjustment range of the unit's rated current).

Thermal memory is incorporated to accurately monitor motor operating temperature. Ambient temperature does not affect soft starter function within its operating limits.

## Auto/Manual Reset

The Select auto or manual reset.
When a fault is present, the auto-reset will attempt to reset the fault every 2.5 seconds. If the fault flag(s) is cleared, the soft starter checks again in five seconds to make sure it stays clear. If it stays clear, the system resets the fault(s).
Note: The motor does NOT automatically restart after a fault is reset

## Notice/Avis.

Automatic reset is not intended for two-wire control devices.
Ce dispositif de reenclenchement automatique ne convient pas aux commandes a deux conducteurs.

12-pin terminal connection wiring capacity and torque requirements for the control wiring.
Table 1. Control Wiring

| Wire Size | Number of <br> Conductors | Torque <br> Req. |
| :--- | :--- | :--- |
| $22-14$ AWG $\left(0.33-2.5 \mathrm{~mm}^{2}\right)$ | 2 | $3.5 \mathrm{Lb}-\mathrm{in}$ |
| 12 AWG $\left(4.0 \mathrm{~mm}^{2}\right)$ | 1 | $(0.4 \mathrm{~N}-\mathrm{m})$ |

Table 2. Control Circuit Fuseholder Kit

| Catalog Number | Fuse Type |
| :--- | :--- |
| C320FBR | Class CC |

Table 3. Short Circuit Rating

| Soft Starter <br> Catalog <br> Number | Three-Phase Short Circuit Rating |  |  |
| :--- | :--- | :--- | :--- |
|  | $\mathbf{2 4 0 V}$ | $\mathbf{4 8 0 V}$ | $\mathbf{6 0 0 V}$ |
| S801+N... | 10 kA | 10 kA | 10 kA |
| S801+R... | 10 kA | 10 kA | 10 kA |

Note: Suitable for use in a circuit capable of delivering not more than 30,000 rms symmetrical amperes, 600 volts maximum when protected by Class L fuses or inverse time circuit breaker rated 600V, 1500 amperes, maximum.

Table 4. Overload-Adjustment Settings

| Catalog <br> Number | Current <br> Range | Value of Adjustment Settings (Amps) |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  | A | B | C | D |
| S801+N37... | $11-37$ | 11 | 19 | 27 | 37 |
| S801+N66... | $20-66$ | 20 | 35 | 50 | 66 |

| Catalog <br> Number | Current <br> Range | Value of Adjustment Settings (Amps) |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  | A | B | C | D |
| S801+R10... | $32-105$ | 32 | 56 | 80 | 105 |
| S801+R13... | $42-135$ | 42 | 73 | 104 | 135 |

The overload trip class can be set to Class 5, 10, 20 , or 30 . The setting determines the time to trip, based on the severity of the overload condition. The trip class setting is made by moving the dip switches into the appropriate position to match the class overload desired.
Find the motor FLA value on the table above. Set the FLA dial to the proper letter.

Table 5. Line and Load Power Wiring

| Lug <br> Kit | Number of <br> Conductors | Lug <br> Type | Wire <br> Sizes <br> Cu 75 <br> Only | Torque <br> Req. | Number <br> of Kits <br> Req'd |
| :--- | :--- | :--- | :--- | :--- | :--- |

S801+N...

| Supplied <br> Standard <br> wint Box <br> Lugs | 1 | Box <br> Lug | 2 AWG | $50 \mathrm{Lb}-\mathrm{in}$ <br> $(5.6 \mathrm{~N}-\mathrm{m})$ | $\mathrm{N} / \mathrm{A}$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  | $4-6$ AWG | $45 \mathrm{Lb}-\mathrm{in}$ <br> $(5.0 \mathrm{~N}-\mathrm{m})$ |  |  |
|  |  | 8 AWG | $40 \mathrm{Lb}-\mathrm{in}$ <br> $(4.5 \mathrm{~N}-\mathrm{m})$ |  |  |
|  |  | $10-14 \mathrm{AWG}$ | $35 \mathrm{Lb}-\mathrm{in}$ <br> $(4.0 \mathrm{~N}-\mathrm{m})$ |  |  |

S801+R...

| Supplied <br> Standard <br> with Box <br> Lugs | 1 | Box <br> Lug | $14-8$ AWG <br> $(2.5-10$ <br> $\left.\mathrm{mm}^{2}\right)$ | $90-100 \mathrm{Lb}-\mathrm{in}$ <br> $(10.1-11.3$ <br> $\mathrm{N}-\mathrm{m})$ | N/A |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  | $6-4 \mathrm{AWG}$ <br> $\left(16-25 \mathrm{~mm}^{2}\right)$ |  |  |  |
|  |  |  | $3-3 / 0 \mathrm{AWG}$ <br> $\left(27-95 \mathrm{~mm}^{2}\right)$ |  |  |

Table 6. MOV Kits Options

| Catalog <br> Number | Description |
| :--- | :--- |
| EMS39 600 V (max) MOV for S801+... Soft Starters <br> EMS41 690 V (max) MOV for S801+.. Soft Starters |  |

Note: LOAD WIRES MUST BE $75^{\circ} \mathrm{C}$ STRANDED COPPER CONDUCTORS ONLY WHEN USING THE PROTECTIVE MODULE [EMS39]
Table 7. 24V Power Supply Kits

| Catalog <br> Number | Steady State <br> Wattage | Inrush <br> Wattage | Input <br> Voltage |
| :--- | :--- | :--- | :--- |
| PSG240E | 240 W | 360 W | $85-264$ VAC |
| PSG240F | 240 W | 360 W | $320-575$ VAC |
