Catalog M0910-4

March, 2011

Up to 250 PSI Air Service Bore Sizes 1" through 14" 17 Mounting Styles

## 

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from the Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having expertise. It is important that you analyze all aspects of your application, including consequences of any failure and review the information concerning the product or system in the current product catalog. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met. The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

## Offer of Sale

The items described in this document are hereby offered for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. This offer and its acceptance are governed by provisions stated on a separate page of the document entitled 'Offer of Sale'.

## Miller Fluid Power AV Series Heavy-Duty Air Cylinder

When the job calls for reliable, heavy-duty performance, specify AV Series. A 100,000 psi yield strength chrome-plated, case-hardened piston rod. A 125,000 psi yield strength rod-end stud with rolled threads. 100,000 psi yield strength tie rods. With this construction, Miller Fluid Power AV Series is rated for air service to 250 psi.

They're truly premium quality cylinders, factory prelubricated for millions of maintenance-free cycles...with or without added lubrication. And to make sure every cylinder is premium quality, we subject each and every one – not just batch samples – to tough inspection and performance tests. See inside for the inside story on all the features that make AV Series the high performance, long lasting choice for all your heavy-duty air applications.

**Note:** Rod diameters over  $2^{1}/_{2}$ " will use a threaded bushing.

- Heavy Duty Service ANSI/(NFPA) T3.6.7R2-1996 Specifications and Mounting Dimension Standards
- Standard Construction Square Head Tie Rod Design
- Nominal Pressure Up to 250 PSI Air Service
- Standard Fluid Filtered Air
- Standard Temperature -10°F. to +165°F.\*
- Bore Sizes 1" through 14"

- Piston Rod Diameter <sup>1</sup>/<sub>2</sub>" through 5<sup>1</sup>/<sub>2</sub>"
- Mounting Styles 14 standard styles
- Strokes Available in any practical stroke length
- Cushions Optional at either end or both ends of stroke. "Float Check" at cap end. Cushions not available on 1" bore.

Specifications

Mounting Styles Ordering Notes

• Rod Ends – Three Standard Choices – Specials to Order

\*See Engineering Section for higher temperature service.

In line with our policy of continuing product improvement, specifications in this catalog are subject to change.

## The inside story on why AV Series is your best choice in heavy duty air cylinders.

Bolted Bushing – assures true concentricity and allows removal without tie rod disassembly.

**Piston Rod** – Medium carbon steel, induction casehardened to 54 R<sub>c</sub>, hard chrome-plated and polished to 10 RMS finish. Piston rods are made from 90,000 to 100,000 psi minimum yield material in  $1/2^{"}$  through 4" diameters. Larger diameters vary between 57,000 and 90,000 psi minimum yield material, depending on rod diameter. The piston thread equals the catalog style #2 rod end thread for each rod diameter to assure proper piston-to-rod thread strength. Two wrench flats are provided for rod end attachment. Rod Seal – The piston rod seal offers maximum sealing performance and efficiency with minimum friction. The highly resilient lips are pressure actuated and wear compensating, giving complete reliability through millions of cycles.  Ports – NPTF ports are standard.

**Steel Head** – Bored and grooved to provide concentricity for mating parts.

End Seals – Pressureactuated cylinder tube-to-head and cap "O" rings.

Secondary Seal – ✓ Double-Service Wiperseal<sup>™</sup> – acts as a secondary pressure seal on the extend stroke and cleans the rod on the return stroke.

#### Piston Rod Stud -

Furnished on 2" diameter rods and smaller when standard style #2 rod end threads are required or on 1% diameter rods and smaller when style #5 threads are required. Also available in 2 times the catalog "A" dimension length. Studs have rolled threads and are made from high strength steel. Anaerobic adhesive is used to permanently lock the stud to the piston rod.

### Long Bearing Surface - is

inboard of the seals, assuring positive lubrication from within the cylinder. An "O" ring is used as a seal between bushing and head, and also serves as a prevailing torque-type lock. Bushing material is nodular iron with flash tin plating through 21/2" dia. rods. 3" and larger bushings are bronze. High Strength Tie Rods – Made from 100,000 psi minimum yield steel with rolled threads for added strength.

#### Adjustable Floating Cushions – Cushions are optional and can be supplied at head end, cap end, or both ends without change in envelope or mounting dimensions.

## Adjustable floating cushions

Cushions are optional, and can be supplied at head end, cap end, or both ends without change in envelope or mounting dimensions. Cushions are adjustable.

The AV Series cylinder design incorporates the longest cushion plungers that can be provided in the standard envelope without decreasing the rod bearing and piston bearing lengths.

- (1) When a cushion is specified at the head end:
  - a. A self-centering plunger is furnished on the piston rod assembly.
  - b. A needle valve is provided that is flush with the side of the head when wide open. It may be identified by the fact that it is socket-keyed. It is located on side number 2, in all mountings except 81, 82 and 89. In these models it is located on side number 3.
  - c. A springless check valve is provided that is also flush with the side of the head and is mounted

on the face opposite the needle valve except on models 81, 82 and 89 where it is mounted on side number 3, next to the needle valve. It may be identified by the fact that it is slotted.

- d. The check and needle valves are interchangeable in the head.
- (2) When a cushion is specified at the cap end:
  - a. A cushion plunger is provided on the piston rod assembly.
  - b. A "float check" self-centering bushing is provided which incorporates a large flow check valve for fast "out-stroke" action.
  - c. A socket-keyed needle valve is provided that is flush with the side of the cap when wide open. It is located on side number 2 in all mountings except 81, 82 and 89. In these models it is located on side number 3.

## Prelubricated Wearing Surfaces

Miller Fluid Power AV Series Air Cylinders are factory prelubricated. Lube-A-Cyl applied to seals, piston, cylinder bore, piston rod and bushing surfaces provides lubrication for normal operation.

Lube-A-Cyl has been field and laboratory tested, and is recommended by Miller Fluid Power for air cylinders where lubricant should remain in the cylinder and not be expelled into the atmosphere.

## Piston with Retainer Nut –

Optional at extra charge.

**Note:** Threaded rod bushings are supplied on cylinders with rod diameters over  $2^{1/2}$ ".

## **Cushion Length**

Cylinder Bore	Rod Diameter*	Cushior (Inc	n Length hes)

## Rod End Dimensions — see table 2

Thread Style 2 Small Male

A high strength rod end stud is supplied on thread style 2 through 2" diameter rods and on thread style 5 through  $1^{3}/s^{n}$  diameter rods. Larger sizes or special rod ends are cut threads. Style 2 rod ends are recommended where the workpiece is secured against the rod shoulder. When the workpiece is not shouldered, style 2 rod ends

are recommended through 2" piston rod diameters and style 5 rod ends are recommended on larger diameters. Use style 4 for applications where female rod end threads are required. If rod end is not specified, style 2 will be supplied.

### "Special" Thread Style X

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify "Style X" and give desired dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

#### Rod End Dimensions — see table 2

A high strength rod end stud is supplied on thread style 2 through 2" diameter rods and on thread style 5 through 1%" diameter rods. Larger sizes or special rod ends are cut threads. Style 2 rod ends are recommended where the workpiece is secured against the rod shoulder. When the workpiece is not

shouldered, style 2 rod ends are recommended through 2" piston rod diameters and style 5 rod ends are recommended on larger diameters. Use style 4 for applications where female rod end threads are required. If rod end is not specified, style 2 will be supplied.

Head Rectangular Flange Mount Model 61 1" - 6" Bore

1" Bore Cylinder Only

Bolted

## Rod End Dimensions — see table 2

A high strength rod end stud is supplied on thread style 2 through 2" diameter rods and on thread style 5 through 1%" diameter rods. Larger sizes or special rod ends are cut threads. Style 2 rod ends are recommended where the workpiece is secured against the rod shoulder. When the workpiece is not shouldered, style 2 rod ends

are recommended through 2" piston rod diameters and style 5 rod ends are recommended on larger diameters. Use style 4 for applications where female rod end threads are required. If rod end is not specified, style 2 will be supplied.

#### "Special" Thread Style X

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify "Style X" and give desired dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

ØFB

4 HOLES

## Cap Rectangular Flange Mount Model 62 1" - 1 1/2" - 2" - 2 1/2" - 5" and 6" Bore

Retainer Held Bushing

Before determining dimensions: See chart on page 3 for cylinder rod combinations that have removable bushings.

Cap Rectangular Flange Mount Model 62 1 1/2" - 6" Bore

Bolted Bushing

## Rod End Dimensions — see table 2

A high strength rod end stud is supplied on thread style 2 through

2" diameter rods and on thread style 5 through 13/8" diameter rods.

Larger sizes or special rod ends are cut threads. Style 2 rod ends

are recommended where the workpiece is secured against the rod

shoulder. When the workpiece is not shouldered, style 2 rod ends

Thread Style 4 Short Female

Thread Style 5 Intermediate Male

are recommended through 2" piston rod diameters and style 5 rod ends are recommended on larger diameters. Use style 4 for applications where female rod end threads are required. If rod end is not specified, style 2 will be supplied.

## "Special" Thread Style X

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify "Style X" and give desired dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

A high strength rod end stud is supplied on thread style 2 through 2" diameter rods and on thread style 5 through 13/8" diameter rods. Larger sizes or special rod ends are cut threads. Style 2 rod ends are recommended where the workpiece is secured against the rod shoulder. When the workpiece is not shouldered, style 2 rod ends

or WF. If otherwise special, furnish dimensioned sketch.

† On 1<sup>1</sup>/2", 2" and 2<sup>1</sup>/2" bore sizes, the head-end (only) pipe thread is not full depth on cylinders with maximum oversize rods. Minimum of three full threads available.

1" bore head is 1<sup>3</sup>/<sub>4</sub>" x 1<sup>1</sup>/<sub>2</sub>".

\*Mounting holes are 1/16" larger than bolt size listed.

\* For all Model 65 and Model 66 mounts with maximum oversized rods.

Tie Rods Extended Mountings 1" to 6" Bore Sizes

#### Tie Rods Extended Both Ends Mount Model 51

1" - 1 1/2" - 2" - 2 1/2" - 5" and 6" Bore With Maximum Oversize Rods

**Tie Rods can be extended:** Both Ends — Model 51; Cap End — Model 52; Head End — Model 53. All Tie Rod Models can be dimensioned from Model 51 drawings shown.

## Tie Rods Extended Both Ends Mount

Model 51 1 1/2" - 6" Bore

Before determining dimensions: See chart on page 3 for cylinder rod combinations that have removable bushings.

## Rod End Dimensions — see table 2

Thread Style 4 Short Female

A high strength rod end stud is supplied on thread style 2 through 2" diameter rods and on thread style 5 through  $1^3/a^{n}$  diameter rods. Larger sizes or special rod ends are cut threads. Style 2 rod ends are recommended where the workpiece is secured against the rod shoulder. When the workpiece is not shouldered, style 2 rod ends

are recommended through 2" piston rod diameters and style 5 rod ends are recommended on larger diameters. Use style 4 for applications where female rod end threads are required. If rod end is not specified, style 2 will be supplied.

## "Special" Thread Style X

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify "Style X" and give desired dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

VB

### Rod End Dimensions — see table 2

A high strength rod end stud is supplied on thread style 2 through 2" diameter rods and on thread style 5 through  $1^{3}/s^{n}$  diameter rods. Larger sizes or special rod ends are cut threads. Style 2 rod ends are recommended where the workpiece is secured against the rod shoulder. When the workpiece is not shouldered, style 2 rod ends

are recommended through 2" piston rod diameters and style 5 rod ends are recommended on larger diameters. Use style 4 for applications where female rod end threads are required. If rod end is not specified, style 2 will be supplied.

D ACROSS

## "Special" Thread Style X

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify "Style X" and give desired dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

## Table 1—Envelope and Mounting Dimensions

Cap Trunnion Mount Model 82 1" - 1 1/2" - 2" - 2 1/2" - 5" and 6" Bore With Maximum Oversize Rods

## Cap Trunnion Mount Model 82 1 1/2" - 6" Bore

## **Bolted Bushing**

**Retainer Held** 

**Bushing** 

Before determining dimensions: See chart on page 3 for . cylinder rod combinations that have removable bushings.

Thread Style 5

Intermediate Male

VA-

VB

## Rod End Dimensions — see table 2

A high strength rod end stud is supplied on thread style 2 through 2" diameter rods and on thread style 5 through  $1^{3}/a^{n}$  diameter rods. Larger sizes or special rod ends are cut threads. Style 2 rod ends are recommended where the workpiece is secured against the rod shoulder. When the workpiece is not shouldered, style 2 rod ends

are recommended through 2" piston rod diameters and style 5 rod ends are recommended on larger diameters. Use style 4 for applications where female rod end threads are required. If rod end is not specified, style 2 will be supplied.

D ACROSS

#### "Special" Thread Style X

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify "Style X" and give desired dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

## Table 1—Envelope and Mounting Dimensions

## Rod End Dimensions — see table 2

Short Female VA D ACROSS FLATS

Thread Style 4

A high strength rod end stud is supplied on thread style 2 through 2" diameter rods and on thread style 5 through 13/8" diameter rods. Larger sizes or special rod ends are cut threads. Style 2 rod ends are recommended where the workpiece is secured against the rod shoulder. When the workpiece is not shouldered, style 2 rod ends

are recommended through 2" piston rod diameters and style 5 rod ends are recommended on larger diameters. Use style 4 for applications where female rod end threads are required. If rod end is not specified, style 2 will be supplied.

### "Special" Thread Style X

Special thread. extension, rod eve, blank, etc., are also available.

To order, specify "Style X" and give desired dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

## **Cap Fixed Clevis Mount**

Model 84 1" - 1 1/2" - 2" - 2 1/2" - 5" and 6" Bore With Maximum Oversize Rods

## Retainer Held Bushing

Note: Cap tie rod nuts not on 1 1/2", 2", 2 1/2" and 3 1/4" bores.

### Cap Fixed Clevis Mount Model 84

1 1/2" - 6" Bore

## Bolted Bushing

Thread Style 5

Intermediate Male

## Note: Cap tie rod nuts not on 1 1/2", 2", 2 1/2" and 3 1/4" bores.

## Rod End Dimensions — see table 2

A high strength rod end stud is supplied on thread style 2 through

2" diameter rods and on thread style 5 through 13/8" diameter rods.

Larger sizes or special rod ends are cut threads. Style 2 rod ends

are recommended where the workpiece is secured against the rod

shoulder. When the workpiece is not shouldered, style 2 rod ends

Thread Style 4 Short Female

D ACROSS FLATS

are recommended through 2" piston rod diameters and style 5 rod ends are recommended on larger diameters. Use style 4 for applications where female rod end threads are required. If rod end is not specified, style 2 will be supplied.

### "Special" Thread Style X

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify "Style X" and give desired dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

**Double Rod End Cylinders** 

### Rod End Dimensions — see table 2

A high strength rod end stud is supplied on thread style 2 through

2" diameter rods and on thread style 5 through 13/8" diameter rods.

Larger sizes or special rod ends are cut threads. Style 2 rod ends

are recommended where the workpiece is secured against the rod

shoulder. When the workpiece is not shouldered, style 2 rod ends

Thread Style 4 Short Female  $\downarrow \bigcirc VA \rightarrow \downarrow C \downarrow \downarrow C \downarrow \downarrow C$ 

Thread Style 5 Intermediate Male

are recommended through 2" piston rod diameters and style 5 rod ends are recommended on larger diameters. Use style 4 for applications where female rod end threads are required. If rod end is not specified, style 2 will be supplied.

## "Special" Thread Style X

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify "Style X" and give desired dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

 $\dagger$  On 11/2", 2" and 21/2" bore sizes, the head-end (only) pipe thread is not full depth on cylinders with maximum oversize rods. Minimum of three full threads available.

1" bore head is 1<sup>3</sup>/<sub>4</sub>" x 1<sup>1</sup>/<sub>2</sub>".

#### How to Use Double Rod Cylinder Dimension Drawings

To determine dimensions for a double rod cylinder, first refer to the desired single rod mounting style cylinder shown on preceding pages of this catalog. After selecting necessary dimensions from that drawing, return to this page and supplement the single rod dimensions with those shown on the drawing and dimension table below. Note that double rod cylinders have a head (Dim. G) at both ends and that dimension LD replaces LB. The double rod dimensions differ from, or are in addition to those for single rod cylinders shown on preceding pages and provide the information needed to completely dimension a double rod cylinder. On a double rod cylinder where the two rod ends are different, be sure to clearly state which rod end is to be assembled at which end.

Port position 1 is standard. If other than standard, specify position 2, 3, or 4 when viewed from one end only.

#### Table 2—Rod End Dimensions and Envelope Dimensions Affected By Rod Size

Side Lug Mount Model 72 7" - 14" Bore

#### Side Tap Mount Model 74 7" - 14" Bore

## Rod End Dimensions — see table 2

# A high strength rod end stud is supplied on thread style 2 through 2" diameter rods and on thread style 5 through 1%" diameter rods. Larger sizes or special rod ends are cut threads. Style 2 rod ends are recommended where the workpiece is secured against the rod shoulder. When the workpiece is not shouldered, style 2 rod ends

Thread Style 5 Intermediate Male

are recommended through 2" piston rod diameters and style 5 rod ends are recommended on larger diameters. Use style 4 for applications where female rod end threads are required. If rod end is not specified, style 2 will be supplied.

## "Special" Thread Style X

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify "Style X" and give desired dimensions for KK, A and WF. If otherwise special, furnish dimensioned sketch.

\* Mounting style MS1 not offered in this rod size.

Head Square Mount Model 63 7" - 14" Bore

## Cap Square Mount

Model 64

### Rod End Dimensions — see table 2

A high strength rod end stud is supplied on thread style 2 through 2" diameter rods and on thread style 5 through 1% diameter rods.

Larger sizes or special rod ends are cut threads. Style 2 rod ends

are recommended where the workpiece is secured against the rod

shoulder. When the workpiece is not shouldered, style 2 rod ends

D ACROSS

FLATS

NI4

are recommended through 2" piston rod diameters and style 5 rod ends are recommended on larger diameters. Use style 4 for applications where female rod end threads are required. If rod end is not specified, style 2 will be supplied.

### "Special" Thread Style X

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify "Style X" and give desired dimensions for KK, A and WF. If otherwise special, furnish dimensioned sketch.

XI

#### Intermediate Trunnion Mount Model 89 8" - 14" Bore

\*\*Dimension "XI" to be specified by customer.

## Rod End Dimensions — see table 2

A high strength rod end stud is supplied on thread style 2 through 2" diameter rods and on thread style 5 through 1%<sup>a</sup> diameter rods. Larger sizes or special rod ends are cut threads. Style 2 rod ends are recommended where the workpiece is secured against the rod

shoulder. When the workpiece is not shouldered, style 2 rod ends

D ACROSS

TL

are recommended through 2" piston rod diameters and style 5 rod ends are recommended on larger diameters. Use style 4 for applications where female rod end threads are required. If rod end is not specified, style 2 will be supplied.

## "Special" Thread Style X

|← j →|

ZB + STROKE

P + STROKE

LB + STROKE

BD-

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify "Style X" and give desired dimensions for KK, A and WF. If otherwise special, furnish dimensioned sketch.

\*\*Dimension "XI" to be specified by customer.

**Cap Fixed Clevis Mount** Model 84 7" - 14" Bore

Models 51 and 53 not offered in 8" bore, rod diameters 4 1/2", 5" and 5 1/2".

### Rod End Dimensions — see table 2

Thread Style 4 Short Female С D ACROSS NI4 FLATS

A high strength rod end stud is supplied on thread style 2 through 2" diameter rods and on thread style 5 through 1% diameter rods. Larger sizes or special rod ends are cut threads. Style 2 rod ends are recommended where the workpiece is secured against the rod shoulder. When the workpiece is not shouldered, style 2 rod ends

D ACROSS NA-FLATS

С

Thread Style 5

Intermediate Male

۱۸/۶ V

are recommended through 2" piston rod diameters and style 5 rod ends are recommended on larger diameters. Use style 4 for applications where female rod end threads are required. If rod end is not specified, style 2 will be supplied.

#### "Special" Thread Style X

Special thread. extension, rod eve, blank, etc., are also available.

To order, specify "Style X" and give desired dimensions for KK, A and WF. If otherwise special, furnish dimensioned sketch.

#### How to Use Double Rod Cylinder Dimension Drawings

To determine dimensions for a double rod cylinder, first refer to the desired single rod mounting style cylinder shown on preceding pages of this catalog. After selecting necessary dimensions from that drawing, return to this page and supplement the single rod dimensions with those shown on the drawing and dimension table below. Note that double rod cylinders have a head (Dim. G) at both ends and that dimension LD replaces LB. The double rod dimensions differ from, or are in addition to those for single rod cylinders shown on preceding pages and provide the information needed to completely dimension a double rod cylinder. On a double rod cylinder where the two rod ends are different, be sure to clearly state which rod end is to be assembled at which end.

Port position 1 is standard. If other than standard, specify pos. 2, 3 or 4 when viewed from one end only.

#### Rod End Dimensions — see table 2

#### Thread Style 5 Intermediate Male

A high strength rod end stud is supplied on thread style 2 through 2" diameter rods and on thread style 5 through 1%" diameter rods. Larger sizes or special rod ends are cut threads. Style 2 rod ends are recommended on larger diameters. Use style 4 for applications where female rod end threads are required. If rod end is not specified, style 2 will be supplied.

#### "Special" Thread Style X

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify "Style X" and give desired dimensions for KK, A and WF. If otherwise special, furnish dimensioned sketch.

Table 1—Envelope and Mounting Dimensions

### **Spherical Bearings for AV Cylinders** Spherical Bearing Mount That Maintains Alignment Through Push and Pull Strokes.

### **Benefits Are...**

- Simplify installation of cylinder
- Reduce cylinder friction
- Eliminate side loading in hard to align applications
- Increase cylinder life by reducing wear on piston and rod bearings
- Save assembly time
- Maintain alignment through push and pull strokes

- Increase rod bearing and rod seal life
- Simplify machine design problems

AV Series pneumatic cylinders are available with spherical bearing mounts at both ends or head and cap end only. The bearing at the cap end is housed in a single stud ear welded to the cap to form an integral structure. At the head end the bearing is mounted in a steel rod eye threaded to the piston rod. Grease fittings are provided for lubrication.

The spherical bearing mount provides swivel connections at both ends of the cylinder to reduce

misalignment problems and to maintain alignment through push and pull strokes.

The bearing races are designed primarily for radial loads and moderate misalignment not to exceed angle "**a**" as shown in Table 1 on the next page.

The accessories, rod eye, pivot pin and clevis brackets are all designed to take maximum loading of the cylinder.

#### **Application and Design Data**

The spherical bearing life is influenced by many factors, i.e., bearing pressure, load direction, oscillating angle and lubrication. The 250 PSI operating pressure rating of the spherical bearing mountings is based on standard commercial bearing ratings.

The spherical bearings are dimensioned to ensure a satisfactory bearing life under normal operating conditions. The bearing races are made of through-hardened steel and are precision ground. They are phosphate treated and coated with dry film lubricant to minimize friction of contacting surfaces. In the case of a permanent unidirectional load to the bearing, or other unusual operating conditions, the use of a larger bearing may be required.

For longer bearing life, regular lubrication will protect the spherical plain bearing from premature wear and corrosion. Rust-inhibiting EP greases of lithium/lead base, preferably with molybdenum disulphide additives are particularly suited. The radial bearings have lubricating holes and grooves in the races permitting lubrication. The bearing housings at the cap and rod end are provided with grease fittings for lubrication.

Maximum angle of swivel in relation to the center line of the pivot pin is shown as angle **a** in the table below. It is recommended that this angle is not exceeded when mounting the cylinder.

#### Mounting Information Head End Mounting

Recommended maximum swivel angle on each side of the cylinder centerline.

#### Table 1

	Head End	d Mounted	Cap End	Mounted
Bore	Angle a	Tan. of a	Angle a	Tan. of a
<b>1</b> 1/2	2°	.035	2°	.035
2	21/2°	.044	41/2°	.079
<b>2</b> <sup>1</sup> / <sub>2</sub>	<b>2</b> <sup>1</sup> /2°	.044	4 <sup>1</sup> /2°	.079
<b>3</b> <sup>1</sup> / <sub>4</sub>	3°	.052	3°	.052
4	<b>2</b> <sup>1</sup> /2°	.044	3°	.052
5 - 14	3°	.052	3°	.052

Note: Dimension X is the maximum off center mounting of the cylinder. To determine dimension X for various stroke lengths multiply distance between pivot pin holes by tangent of angle **a**. For extended position use X = XL + 2X stroke.

#### Cap End Mounting

Maximum operating pressure is based on tensile strength of material. Pressure ratings are based on standard commercial bearing ratings.

\*Dimension CD is hole diameter.

\*\*To match pin diameter in rod eye and cap, when an oversize rod is required, specify rod end style 'X', 'KK' thread and 'A' thread length for the standard rod diameter (first rod listed for the bore), and 'W' for the oversize rod. Order the rod eye and clevis bracket for the required bore size from the tables on the Spherical Bearing Accessories page.

Maximum operating pressure is based on tensile strength of material. Pressure ratings are based on standard commercial bearing ratings. \*Dimension CD is hole diameter

\*Dimension CD is hole diameter. \*\*To match pin diameter in rod eye and cap, when an oversize rod is required, specify rod end style 'X', 'KK' thread and 'A' thread length for the standard rod diameter (first rod listed for the bore), and 'W' for the oversize rod. Order the rod eye and clevis bracket for the required bore size from the tables on the Spherical Bearing Accessories page.

Miller offers a complete range of Cylinder Accessories to assure you of the greatest versatility in present or future cylinder applications. Accessories offered for the respective cylinder include the Rod Eye, Pivot Pin and Clevis Bracket. To select the proper part number for any desired accessory refer to the charts below.

# Miller Fluid Power Non-Lube Heavy-Duty Air Cylinders

### **AVN Series**

# For millions of trouble free cycles

- Nominal pressure 250 PSI Air Service
- Standard Bore Sizes 1<sup>1</sup>/<sub>2</sub>" through 14"
- Piston Rod Diameters <sup>5</sup>/<sub>8</sub>" through 5<sup>1</sup>/<sub>2</sub>"
- 17 Standard Mounting Styles
- NFPA Interchangeable

# The AVN Series Non-Lube Air Cylinder with Proven Performance Millions of trouble free cycles with... ZERO LEAKAGE.

**Increased Market Demand,** continuous research, and testing efforts inspired the development of the AVN Series Non-Lubricated Air Cylinder. The AVN Series piston rod and cylinder tube surfaces act as highly efficient lubricant reservoirs, maintaining their own lubricant film. Other manufacturers pack grease into grooves and pockets and call them reservoirs. The fact of the matter is that as those grooves empty out over time; grease is being transported out of the cylinder and into the control system components and the atmosphere. The AVN Series concept eliminates that problem by maintaining the lubricant film where it belongs: on the seals, bearing surfaces, piston rod and cylinder bore.

**Benefits include...**long seal and bearing life and since no oil is added through the use of lubricators – no oil is expelled into the atmosphere with the exhaust air as the cylinder strokes.

#### Anatomy of AVN Series Sealing and Lubricant Retention Systems

High integrity lubricant film with suspended PTFE particles

#### In the AVN Series you get all the cost saving benefits and features of the heavy-duty AV Series air cylinder including...

- Bolted Bushing Assembly for positive no leak sealing
- Piston rod, hard chrome-plated and casehardened steel
- High strength rolled thread Piston Rod Stud

#### **Standard Specifications**

- Heavy-Duty Service ANSI/(NFPA) T3.6.7 R2-1996 Mounting Dimension Standards
- Standard Construction Square Head Tie Rod Design
- Standard Temperature 10°F to +165°F

■ Steel tube with chrome-plated micro finish bore...

**Plus** the innovative "Non-Lube" feature which further increases your benefits of lower operating and maintenance costs.

- Standard Fluid Filtered Air
- Strokes Available in any practical stroke length
- Cushions Optional at either end or both ends of stroke. "Float Check" at cap end.

In line with our policy of continuing product improvement, specifications in this bulletin are subject to change.

#### **Available Bore and Rod Sizes**

#### How to Order AVN Series Non-Lube Air Cylinders

#### Data Required on all AVN Cylinder Orders

When ordering AVN Series cylinders, be sure to specify each of the following requirements:

(**Note:** Duplicate cylinders can be ordered by giving the SERIAL NUMBER from the original cylinder. Factory records supply a quick, positive identification.)

#### a) Bore Size

#### b) Mounting Style

Specify your choice of mounting style — as shown in this catalog.

#### c) Series Designation (AVN)

#### d) Length of Stroke

#### e) Piston Rod Diameter

Specify rod diameter, standard rod diameters will be furnished if not otherwise specified, unless length of stroke makes the application questionable.

#### f) Piston Rod End Thread Style

Give thread style number or specify dimensions. Thread style number 2 will be supplied if not otherwise specified.

#### g) Cushions (if required)

Specify "Cushion-rod end," "Cushion-cap end" or "Cushion-both ends" as required. If cylinder is to have a double rod and only one cushion is required, be sure to specify clearly which end of the cylinder is to be cushioned.

#### **Cylinder Accessories**

Miller offers a complete range of cylinder accessories to assure you of the greatest versatility in present and future cylinder applications.

#### **Rod End Accessories**

Accessories offered for the rod end of the cylinder include Rod Clevis, Eye Bracket, Rod Eye, Clevis Bracket, and Pivot Pin. To select the proper part number for any desired accessory, refer to the table below or on the opposite page and look in the row to the right of the rod thread in the first column. For economical accessory selection, it is recommended that rod end style 2 be specified on your cylinder order.

#### Accessory Load Capacity

The various accessories have been load rated for your convenience. The load Capacity in lbs. Is the recommended maximum load for that accessory based on a 4:1 design factor in tension. (Pivot Pin is rated in shear.) Before specifying, compare the actual load or the tension (pull) force at maximum operating pressure of the cylinder with the load capacity of the accessory you plan to use. If load or pull force of cylinder exceeds load capacity of accessory, consult factory.

	Rod C	levis	Eye Br	acket	Pivot	Pin

† Includes Pivot Pin

Cylinder accessory dimensions conform to NFPA recommended standard NFPA/T3.6.8 R1-1984, NFPA recommended standard fluid power systems - cylinder - dimensions for accessories for cataloged square head industrial cylinders.

#### **Rod End Accessories**

Accessories offered for the rod end of the cylinder include Rod Clevis, Eye Bracket, Rod Eye, Clevis Bracket, and Pivot Pin. To select the proper part number for any desired accessory, refer to the table below or on the opposite page and look in the row to the right of the rod thread in the first column. For economical accessory selection, it is recommended that rod end style 2 be specified on your cylinder order.

#### Accessory Load Capacity

The various accessories have been load rated for your convenience. The load Capacity in lbs. is the recommended maximum load for that accessory based on a 4:1 design factor in tension. (Pivot Pin is rated in shear.) Before specifying, compare the actual load or the tension (pull) force at the maximum operating pressure of the cylinder with the load capacity of the accessory you plan to use. If load or pull force of cylinder exceeds load capacity of accessory, consult factory.

Split Couplers and Weld Plates

**WARNING:** Piston rod separation from the machine member can result in severe personal injury or even death to nearby personnel. The cylinder user must make sure the weld holding the weld plate to the machine is of sufficient quality and size to hold the intended load. The cylinder user must also make sure the bolts holding split coupler to the weld plate are of sufficient strength to hold the intended load and installed in such a way that they will not become loose during the machine's operation.

Note: Screws are not included with split coupler or weld plate.

# Linear Alignment Couplers are available in 13 standard thread sizes...

### **Cost Saving Features and Benefits Include...**

- Maximum reliability for trouble-free operation, long life and lower operating costs
- Increased cylinder life by reducing wear on piston and rod bearings
- Simplifying cylinder installation and reducing assembly costs
- Increase rod bearing and rod seal life for lower maintenance costs

**Alignment Coupler**

#### **General Formula**

The cylinder output forces are derived from the formula:

 $F = P \times A$ Where F = Force in pounds. P = Pressure at the cylinder in pounds per square inch, gauge. A = Effective area of cylinder piston in square inches.

Free Air refers to normal atmospheric conditions of the air at sea level (14.7 psi). Use above cu. ft. free air required data to

compute CFM required from a compressor at 80 psi. cu. ft. of free air required at other pressures can be calculated using formula below.

$$V^{1} = \frac{(P^{2} + 14.7) V^{2}}{14.7}$$

Where  $V^1$  = Free air consumption per inch of stroke (cubic feet).

 $V^2$  = Cubic feet displaced per inch of stroke.

P<sup>2</sup> = Gauge pressure required to move maximum load.

#### **Operating Fluids and Temperature Range**

AV Series cylinders are equipped with seals for use with lubricated air. In some cases special seals are required.

#### **Class 1 Seals**

Class 1 seals are the standard seals provided in a cylinder assembly. They are intended for use with fluids such as: air, nitrogen, mineral base hydraulic oil or MIL-H-5606 within the temperature range of -10°F (-23°C) to +165°F (+74°C). The individual seals may be nitrile (Buna-N), enhanced polyurethane, polymyte, PTFE or filled PTFE.

#### Class 4 Seals — Nitrile Seals

Class 4 seals are intended for low temperature service with the same type of fluids as used with Class 1 seals within the temperature range of -50°F (-46°C) to +150°F (+66°C). Class 4 seals are nitrile seals. Lipseals will have leather, polymyte or PTFE back-up washers when required. O-rings will have nitrile back-up washers when required.

Note: Certain fluids may react adversely with Class 4 seals compared to Class 1 seals.

#### Class 5 Seals — Fluorocarbon Seals

Class 5 seals are intended for elevated temperature service. Note: In addition, Class 5 seals can be used with fluids listed below under Class 1 service. Class 5 seals can operate with a temperature range of -10°F (-23°C) to +250°F (+121°C). Fluorocarbon seals may be operated to +400°F (+204°C) with limited service life. For temperatures above +250°F (+121°C) the cylinder must be manufactured with non-studded piston rod thread and a pinned piston to rod connection. Class 5 seals are fluorocarbon seals. Lipseals will have PTFE back-up washers when required. O-rings will have fluorocarbon back-up when required.

#### **Lipseal Pistons**

Under most conditions lipseals provide the best all around service for pneumatic applications. Lipseals with a back-up washers are often used for hydraulic applications when virtually zero static leakage is required. Lipseals will function properly in these applications when used in conjunction with moderate hydraulic pressures.

#### Warning!

The piston rod stud and the piston rod to piston threaded connections are secured with an anaerobic adhesive which is temperature sensitive. Cylinders specified with fluorocarbon seals are assembled with anaerobic adhesive having a maximum temperature rating of +250°F (+121°C). Cylinders specified with all other seal compounds are assembled with anaerobic adhesive have a maximum operating temperature rating +165°F (+74°C). These temperature limitations are necessary to prevent the possible loosening of the threaded connections. Cylinders originally manufactured with Class 1 seals (Nitrile) that will be exposed to ambient temperature service. Contact the factory immediately and arrange for the piston to rod and the stud to piston rod connections to be properly reassembled to withstand the higher temperature service.

Class No.	Typical Fluids	Temperature Range
1 Standard Nitrile Polyurethane	Air, Nitrogen Hydraulic Oil, Mil-H-5606 Oil	-10°F (-23°C) to +165°F (+74°C)
4 Special (Nitrile) (At extra cost)	Low Temperature Air	-50°F (-46°C) to +150°F (+66°C)
5 Optional (At extra cost) (Fluorocarbon Seals)	High Temperature	See above paragraph on Fluorocarbon seals for recommended temperature range.

Notes

NOTES

#### Ports

Miller AV Series pneumatic cylinders are supplied with NPTF pipe thread ports. If specified on your order, extra ports can be provided on the sides of heads or caps that are not occupied by mountings or cushion valve.

Standard port location is position 1 as shown on line drawings in product catalog and Figure 1 below. Cushion adjustment needle and check valves are at position 2 (or 3), depending on mounting style. Heads or caps which do not have an integral mounting can be rotated and assembled with ports at 90° or 180° from standard position. Mounting styles on which head or cap can be rotated at no extra charge are shown in Table A below. To order, specify by position number. In such assemblies the cushion adjustment needle and check valve rotate accordingly since their relationship with port position does not change.

#### Figure 1

#### Table A

	Port Position Available		
Model	Head End	Cap End	
51, 52, 53, 61, 62, 63, 64, 65, 66, 89	1, 2, 3 or 4	1, 2, 3 or 4	
82, 84	1,2, 3 or 4	1 or 3	
81	1 or 3	1, 2, 3 or 4	
72, 74	1	1	

Ports can be supplied at positions other than those shown in Table A at an extra charge. To order, specify port position as shown in Figure 1.

#### **Oversize Ports**

Oversize NPTF ports can be provided, at an extra charge. For ports one size larger than standard, welded port bosses which protrude from the side of the head or cap are supplied. For dimensions, see drawing below and table.

#### **International Ports**

Other port configurations to meet international requirements are available at extra cost. Miller AV Series cylinders can be supplied, on request, with British standard taper port (BSPT). Such port has a taper of 1 in 16 measured on the diameter ( $^{1}/_{16}$ " per inch). The thread form is Whitworth System, and size and number of threads per inch are as follows:

#### Table B

Nominal Pipe Size	No. Threads Per Inch	Pipe O.D.
1/8	28	.383
1/4	19	.518
3/8	19	.656
1/2	14	.825
3/4	14	1.041
1	11	1.309
<b>1</b> <sup>1</sup> / <sub>4</sub>	11	1.650
<b>1</b> <sup>1</sup> / <sub>2</sub>	11	1.882
2	11	2.347

British standard parallel internal threads are designated as BSPP and have the same thread form and number of threads per inch as the BSPT type and can be supplied, on request, at extra cost. Unless otherwise specified, the BSPP or BSPT port size supplied will be the same nominal pipe size as the NPTF port for a given bore size cylinder.

Metric ports can also be supplied to order at extra cost. Consult factory.

Stroke length tolerances are required due to buildup of tolerances of piston, head, cap and cylinder body. Standard production stroke tolerances run  $+1/_{32}$ " to  $-1/_{64}$ " up to 20" stroke,  $+1/_{32}$ " to -20" for 21" to 60" and  $+1/_{32}$ " to  $-1/_{32}$ " for greater than 60" stroke. For closer tolerances on stroke length, it is necessary to specify the required tolerance plus the operating pressure

#### **Cylinder Weights**

The weights shown in Table A are for Miller Series AV and AVN cylinders with various piston rod diameters. To determine the net weight of a cylinder, first select the proper basic weight for zero stroke, then calculate the weight of the cylinder stroke and add the result to the basic weight. For extra rod extension,

and temperature at which the cylinder will operate. Stroke tolerances smaller than .015" are not generally practical due to elasticity of cylinders. If machine design requires such close tolerances, use of a stroke adjuster may achieve the desired result.

use piston rod weights per inch shown in Table B. Weights of cylinders with intermediate rods may be estimated from table below by taking the difference between the piston rod weights per inch and adding it to the standard rod diameter weight for the cylinder bore size involved.

			od Cylinders . Zero Stroke	Add Per	Double Rod Cylinders Basic Wt. Zero Stroke		Add Per

#### **Stop Tubing**

Stop tube is recommended to lengthen the distance between the bushing and piston to reduce bearing loads when the cylinder is fully extended. This is especially true of horizontally mounted and long stroke cylinders. Long stroke cylinders achieve additional stability through the use of a stop tube.

When specifying cylinders with long stroke and stop tube, be sure to call out the net stroke and the length of the stop tube. Machine design can be continued without delay by laying in a cylinder equivalent in length to the NET STROKE PLUS STOP TUBE LENGTH, which is referred to as GROSS STROKE.

Double piston design is supplied on air cylinders with cushion head end or both ends.

#### **Drawing B**

This design is supplied on all non-cushion cylinders.

#### **Mounting Classes**

Standard mountings for fluid power cylinders fall into three basic groups. The groups can be summarized as follows:

**Group 1** Straight Line Force Transfer with fixed mounts which absorb force on cylinder centerline.

**Group 2** Pivot Force Transfer. Pivot mountings permit a cylinder to change its alignment in one plane.

**Group 3** Straight Line Force Transfer with fixed mounts which do not absorb force on cylinder centerline.

Because a cylinder's mounting directly affects the maximum pressure at which the cylinder can be used, the chart below should be helpful in selection of the proper mounting combination for your application. Stroke length, piston rod connection to load, extra piston rod length over standard, etc., should be considered for thrust loads. Alloy steel mounting bolts are recommended for all mounting styles, and thrust keys are recommended for Group 3.

#### Piston Rod — Stroke Selection Chart

#### How to Use the Chart

The selection of a piston rod for thrust (push) conditions requires the following steps:

1. Determine the type of cylinder mounting style and rod end connection to be used. Then consult the chart below and find the "stroke factor" that corresponds to the conditions used.

2. Using this stroke factor, determine the "basic length" from the equation:

Basic		Actual		Stroke
Length	=	Stroke	х	Factor

The graph is prepared for standard rod extensions beyond the face of the gland retainers. For rod extensions greater than standard, add the increase to the stroke in arriving at the "basic length."

3. Find the load imposed for the thrust application by multiplying the full bore area of the cylinder by the system pressure.

4. Enter the graph along the values of "basic length" and "thrust" as found above and note the point of intersection:

A) The correct piston rod size is read from the diagonally curved line labeled "Rod Diameter" next *above* the point of intersection.

B) The required length of stop tube is read from the right of the graph by following the shaded band in which the point of intersection lies.

C) If required length of stop tube is in the region labeled "consult "factory," submit the following information for an individual analysis: 1) Cylinder mounting style.

2) Rod end connection and method of guiding load.

3) Bore, required stroke, length of rod extension (Dim. "LA") if

greater than standard, and series of cylinder used.

4) Mounting position of cylinder. (Note: If at an angle or vertical, specify direction of piston rod.)

5) Operating pressure of cylinder if limited to less than standard pressure for cylinder selected.

Recommended Mounting Styles for Maximum Stroke and Thrust Loads	Rod End Connection	Case	Stroke Factor
Groups 1 or 3 Long stroke cylinders for thrust loads should be mounted using a heavy-duty mounting style at one end, firmly fixed	Fixed and Rigidly Guided		.50
and aligned to take the principal force. Additional mounting should be specified at the opposite end, which should be used for alignment and support. An intermediate support may also be desirable for long stroke cylinders mounted horizontally. Machine mounting pads can be adjustable for support mountings to achieve proper alignment.	Pivoted and Rigidly Guided		70
	Supported but not Rigidly Guided		2.00
Group 2 Model 81 — Trunnion on Head	Pivoted and Rigidly Guided		1.00
Model 89 — Intermediate Trunnion	Pivoted and Rigidly Guided	V IIIIII	1.50
Model 82 — Trunnion on Cap or Model 84 — Clevis on Cap	Pivoted and Rigidly Guided		2.00

Cushion ratings for **air cylinders only** are described in Table B-7 and Graph B-3. To determine whether a cylinder will adequately stop a load without damage to the cylinder, the weight of the load (including the weight of the piston and the piston rod from Table B-6) and the maximum speed of the piston rod must first be determined. Once these two factors are known, the Kinetic Energy Graph may be used. Enter the graph at its base for the value of weight determined, and project vertically to the required speed value. The point of intersection of these two lines will be the cushion rating number required for the application.

To determine the total load to be moved, the weight of the piston and rod must be included.

Total Weight = Weight of the piston and non-stroke rod length (Column 1) + weight of the rod per inch of stroke x the inches of stroke (Column 2) + the load to be moved.

Graph B3 — Kinetic Energy — Air Cylinders

#### Table B-6 — Weight

	3		
Bore Ø	Column 1 Basic Wgt. (Lbs.) for Piston & Non-Stroke Rod	Rod Ø	Column 2 Basic Wgt. (Lbs.) for 1" Stroke
<b>1</b> <sup>1</sup> / <sub>2</sub>	1.5	<sup>5</sup> /8	.087
2	3.0	1	.223
2 <sup>1</sup> / <sub>2</sub>	5.4	<b>1</b> <sup>3</sup> /8	.421
<b>3</b> <sup>1</sup> / <sub>4</sub>	8.3	<b>1</b> <sup>3</sup> / <sub>4</sub>	.682
4	14.2	2	.89
5	29	2 <sup>1</sup> / <sub>2</sub>	1.39
6	41	3	2.0
8	89	<b>3</b> <sup>1</sup> / <sub>2</sub>	2.73
10	115	4	3.56
12	161	5	5.56
14	207	5 <sup>1</sup> /2	6.73

Example: A 3-1/4" bore cylinder, having a 1" diameter rod and 25" stroke; load to be moved is 85 lbs. Total load to be moved is then 8.3 lbs. + .223 lbs./in. x 25 in. + 85 lbs. or a total of 99 lbs.

WEIGHT (LB)

Now refer to Table B-7 and find the cushion ratings, using bore size and rod diameter of the cylinder selected. If a simple circuit is used, with no meter out or speed control, use the "no back pressure, Column A" values. If a meter out or speed control is to be used, use the back pressure column values, If the cushion rating found in Table B-7 (below) is **greater** than the number determined in Graph

Air Cylinder Cushion Ratings	
Air Réquirements	

the cylinder will stop the load adequately. If the cushion rating in Table B-7 is **smaller** than the number found in Graph B-3, then a larger bore cylinder should be used. In those applications where back pressures exist in the exhaust lines, it is possible to exceed the cushion ratings shown in Table B-7. In these cases, consult the factory and advise the amount of back pressure.

Bore Ø	Rod Ø	Rating with No Back Pressure	Rating with Back Pressure

#### Air Requirement per Inch of Cylinder Stroke

The amount of air required to operate a cylinder is determined from the volume of the cylinder and its cycle in strokes per minute. This may be determined by use of the following formulae which apply to a single-acting cylinder.

$$V = \frac{3.1416 L D^2}{4}$$
  $C = \frac{fV}{1728}$ 

Where: V = Cylinder volume, cu. in.

L = Cylinder stroke length, in.

D = Internal diameter of cylinder in.

C = Air required, cfm

f = Number of strokes per minute

The air requirements for double-acting cylinder is almost double that of a single-acting cylinder, except for the volume of the piston rod.

The air flow requirements of a cylinder in terms of cfm should not be confused with compressor ratings which are given in terms of free air. If compressor capacity is involved in the consideration of cylinder air requirements it will be necessary to convert cfm values to free air values. This relationship varies for different gauge pressures.

Thrust (lbs.) = Operating Pressure x Area of Cylinder Bore

**Note:** On the "out" stroke the air pressure is working on the entire piston area, but on the "in" stroke the air pressure works on the piston area less the rod area.

Graph B-4 and B-5 offer a simple means to select pneumatic components for dynamic cylinder applications. It is only necessary to know the force required, the desired speed and the pressure which can be maintained at the inlet to the F-R-L "Combo." The graphs assume average conditions relative to air line sizes, system layout, friction, etc. At higher speeds, consider appropriate cushioning of cylinders.

The general procedure to follow when using these graphs is:

1. Select the appropriate graph depending upon the pressure which can be maintained to the system — Graph B-4 for 100 psig and Graph B-5 for 80 psig.

2. Determine appropriate cylinder bore. Values underneath the diagonal cylinder bore lines indicate the maximum recommended dynamic thrust developed while the cylinder is in motion. The data in the table at the bottom of each graph indicates available static force for applications

#### Graph B-4 — This graph is determined by having 100 psig available under flowing conditions.

#### Table B-8 — Thrust Developed

Bore Size	<b>1</b> <sup>1</sup> / <sub>2</sub>	2	<b>2</b> <sup>1</sup> / <sub>2</sub>	31/4	4	5	6	8	10
Dynamic Thrust (lbs.)	88	155	240	410	620	980	1400	2500	3920
Static Thrust (lbs.)	177	314	491	830	1250	1960	2820	5020	7850

3. Read upward on appropriate rod speed line to intersection with diagonal cylinder bore line. Read right from intersection point to determine the required Cv of the valve and the speed controls. Both the valve and speed controls must have this Cv.

The following examples illustrate use of the graphs:

**Example 1:** Assume it is necessary to raise a 900 lb. load 24 inches in two seconds. With 100 psig maintained at the inlet to the F-R-L, use Graph B-4. The 5-inch bore cylinder is capable of developing the required thrust while in motion. Since 24 inches in two seconds is equal to 60 fpm, read upward on the 60 fpm line to the intersection of the 5-inch bore diagonal line. Reading to the right indicates that the required valve and speed controls must each have a Cv of over 1.9.

**Example 2:** Assume similar conditions to Example 1, except that only 80 psig will be available under flowing conditions. Using Graph B-5, a 6-inch bore cylinder is indicated. Read upward on the 60 fpm line to the intersection point. Interpolation of the right-hand scale indicates a required valve and speed control Cv of over 2.8.

**Example 3:** Assume similar conditions to Example 1, except that the load is being moved in a horizontal plane with a coefficient of sliding friction of 0.2. Only a 180 lb. thrust is now required (900 lb. x 0.2). Consult Graph B-4. The  $2^{1}/_{2}$  inch bore cylinder will develop sufficient thrust, and at 60 fpm requires a valve and speed control Cv of about

#### Graph B-5 — This graph is determined by having 80 psig available under flowing conditions.

#### Seal Kits for Class 1 Service

Material: Buna-N (Nitrile)

For operating temperature and fluid compatability, see "Operating Fluids and Temperature Range" page.

Bushing and spanner wrenches are available to ease (rod) seal or bushing removal without disassembly of the cylinder. **(For rod diameters over 2 1/2".)** For detailed seal replacement instructions see service bulletin M0995-M1, M2 and M3.

#### How to Order

Individual seals contained in the kits are available separately; however, we recommend purchasing complete kits because of convenience and lower replacement cost. When ordering seal kits, give part number listed above. To be sure of exact replacement, give serial number of cylinder when ordering replacement kits or seals.

Standard Seals - Class 1 Service Kits are standard. In addition to standard seals, each kit includes the special composite components ready for installation. These seals are suitable for use when air is the operating medium.

The recommended operating temperature range for Class 1 seals is  $-10^{\circ}$  F to  $+165^{\circ}$ F.

Notes

NOTES

### How to Order AV Series Cylinders

#### **Data Required On All Cylinder Orders**

When ordering AV Series cylinders, be sure to specify each of the following requirements:

(**NOTE:** – Duplicate cylinders can be ordered by giving the SERIAL NUMBER from the original cylinder. Factory records supply a quick, positive identification.)

#### a) Series Designation ("AV")

#### b) Mounting Model

Specify your choice of mounting – as shown and dimensioned in this catalog.

- c) Bushing Style ("B" or "R")
- d) Piston Rod End Thread Style Call out thread style number. Thread style 2 will be furnished if not otherwise supplied. For special rod ends specify style "X" as indicated below.
- e) Cushions (if required)

Specify "Cushion-head end," "Cushion-cap end" or "Cushion-both ends" as required. If cylinder is to have a double rod and only one cushion is required, be sure to specify clearly which end of the cylinder is to be cushioned.

f) Bore Size

#### g) Length of Stroke

#### h) Piston Rod Diameter Call out rod diameter. In AV Series cylinders, standard rod diameters will be furnished if not otherwise specified, unless length of stroke makes the application questionable.

- i) Ports
- NPTF is standard.
- j) Port Locations

#### k) Modifications

Any modifications that are not identified in the cylinder number shown on the following page should be added to the specifications. These can include special fluids, special seals, air bleeds, double rod cylinder with different rod end styles and diameters. For further information consult factory.

#### Style X Rod End

A style X rod end indicates a special rod end configuration. All special rod ends must be described by at least **all three**: KK; A; or W/WF specified with the rod fully retracted. A sketch or drawing should be submitted for rod ends requiring special machining such as snap ring grooves,

#### Service Policy

When cylinders are returned to the factory for repairs, it is standard policy for Miller Fluid Power to make such part replacements as will put the cylinder in as good as new condition. Should the condition of the returned cylinder be such that expenses for repair exceed the cost of a new one, you will be notified. keyways, tapers, multiple diameters, etc. It is good design practice to have this machining done on a diameter at least 0.065 inches smaller than the piston rod diameter. This allows the piston rod to have a chamfer preventing rod seal damage during assembly or maintenance.

#### **Certified Dimensions**

Miller Fluid Power guarantees that all cylinders ordered from this catalog will be built to dimensions shown. All dimensions are certified to be correct, and thus it is not necessary to request certified drawings.

#### How to Order - Example: AV72B2N-04.00-8.000-0138 N11-0

AV	72	В	2	N -	04.00 -	8.000 -	0138	Ν	1	1-	0
Series	Mounting Style	Bushing	Rod End Style	Cushions	Bore Dia.	Stroke	Rod Dia.	Port Type	Po Loca	-	Modified
AV DAV (D = Dbl. Rod End AVN (N = Non- Lube) DAVN		B = Bolted Bushing R = Retainer Held Bushing	2 (Standard) 4 5 X (Special)	R = Rod End Cushioned $C =$ Cap End Cushioned $B =$ Both Ends Cushioned $N =$ Non- Cushioned				N = NPTF	Head End 1 (St 2 3 4	2 3 4	0 = Stan- dard 9* = Modi- fied

9\* The number 9 refers to special options or modifications that deviate from the standard product offering. Non-standard modifications and options not identified in the cylinder model number should be added in the notes when placing an order.

#### Modifications which can be placed under the designator "9" are as follows:

- Fluorocarbon Seals for applications which experience operating temperatures up to and including 250°F
- Multiple Ports
- Special Port Threads
- Cushion Location
- Special Mounts

Note: The standard #1 port location is at the top of the cylinder, and the standard cushion adjustment screw is in position #2 when facing the rod end of the cylinder. If multiple ports are required, the last number of the part number should be "9", indicating modified and the desired port location specified in the notes.

Cushions not available on 1" bore.

#### Safety Guide for Selecting and Using Hydraulic, Pneumatic Cylinders and Their Accessories

WARNING:  $\triangle$  FAILURE OF THE CYLINDER, ITS PARTS, ITS MOUNTING, ITS CONNECTIONS TO OTHER OBJECTS, OR ITS CONTROLS CAN RESULT IN:

- Unanticipated or uncontrolled movement of the cylinder or objects connected to it.
- Falling of the cylinder or objects held up by it.
- Fluid escaping from the cylinder, potentially at high velocity.

THESE EVENTS COULD CAUSE DEATH OR PERSONAL INJURY BY, FOR EXAMPLE, PERSONS FALLING FROM HIGH LOCATIONS, BEING CRUSHED OR STRUCK BY HEAVY OR FAST MOVING OBJECTS, BEING PUSHED INTO DANGEROUS EQUIPMENT OR SITUATIONS, OR SLIPPING ON ESCAPED FLUID.

Before selecting or using Parker Hannifin Corporation (the Company) cylinders or related accessories, it is important that you read, understand and follow the following safety information. Training is advised before selecting and using the Company's products.

#### 1.0 General Instructions

**1.1 Scope** – This safety guide provides instructions for selecting and using (including assembling, installing, and maintaining) cylinder products. This safety guide is a supplement to and is to be used with the specific Company publications for the specific cylinder products that are being considered for use.

**1.2 Fail Safe** – Cylinder products can and do fail without warning for many reasons. All systems and equipment should be designed in a fail-safe mode so that if the failure of a cylinder product occurs people and property won't be endangered.

**1.3 Distribution** – Provide a free copy of this safety guide to each person responsible for selecting or using cylinder products. Do not select or use the Company's cylinders without thoroughly reading and understanding this safety guide as well as the specific Company publications for the products considered or selected.

1.4 User Responsibility – Due to very wide variety of cylinder applications and cylinder operating conditions, the Company does not warrant that any particular cylinder is suitable for any specific application. This safety guide does not analyze all technical parameters that must be considered in selecting a product. The hydraulic and pneumatic cylinders outlined in this catalog are designed to the Company's design guidelines and do not necessarily meet the design guideline of other agencies such as American Bureau of Shipping, ASME Pressure Vessel Code etc. The user, through its own analysis and testing, is solely responsible for:

- Making the final selection of the cylinders and related accessories.
- Determining if the cylinders are required to meet specific design requirements as required by the Agency(s) or industry standards covering the design of the user's equipment.
- Assuring that the user's requirements are met, OSHA requirements are met, and safety guidelines from the applicable agencies such as but not limited to ANSI are followed and that the use presents no health or safety hazards.
- Providing all appropriate health and safety warnings on the equipment on which the cylinders are used.

1.5 Additional Questions – Call the appropriate Company technical service department if you have any questions or require any additional information. See the Company publication for the product being considered or used, or call 1-847-298-2400, or go to <u>www.parker.com</u>, for telephone numbers of the appropriate technical service department.

#### 2.0 Cylinder and Accessories Selection

**2.1 Seals** – Part of the process of selecting a cylinder is the selection of seal compounds. Before making this selection, consult the "seal information page(s)" of the publication for the series of cylinders of interest.

The application of cylinders may allow fluids such as cutting fluids, wash down fluids etc. to come in contact with the external area of the cylinder. These fluids may attack the piston rod wiper and or the primary seal and must be taken into account when selecting and specifying seal compounds.

Dynamic seals will wear. The rate of wear will depend on many operating factors. Wear can be rapid if a cylinder is mis-aligned or if the cylinder has been improperly serviced. The user must take seal wear into consideration in the application of cylinders.

2.2 Piston Rods – Possible consequences of piston rod failure or separation of the piston rod from the piston include, but are not limited to are:

- · Piston rod and or attached load thrown off at high speed.
- High velocity fluid discharge.
- Piston rod extending when pressure is applied in the piston retract mode.

Piston rods or machine members attached to the piston rod may move suddenly and without warning as a consequence of other conditions occurring to the machine such as, but not limited to:

· Unexpected detachment of the machine member from the piston rod.

- Failure of the pressurized fluid delivery system (hoses, fittings, valves, pumps, compressors) which maintain cylinder position.
- Catastrophic cylinder seal failure leading to sudden loss of pressurized fluid.
- · Failure of the machine control system.

Follow the recommendations of the "Piston Rod Selection Chart and Data" in the publication for the series of cylinders of interest. The suggested piston rod diameter in these charts must be followed in order to avoid piston rod buckling.

Piston rods are not normally designed to absorb bending moments or loads which are perpendicular to the axis of piston rod motion. These additional loads can cause the piston rod to fail. If these types of additional loads are expected to be imposed on the piston rod, their magnitude should be made known to our engineering department.

The cylinder user should always make sure that the piston rod is securely attached to the machine member.

On occasion cylinders are ordered with double rods (a piston rod extended from both ends of the cylinder). In some cases a stop is threaded on to one of the piston rods and used as an external stroke adjuster. On occasions spacers are attached to the machine member connected to the piston rod and also used as a stroke adjuster. In both cases the stops will create a pinch point and the user should consider appropriate use of guards. If these external stops are not perpendicular to the mating contact surface, or if debris is trapped between the contact surfaces, a bending moment will be placed on the piston rod, which can lead to piston rod failure. An external stope and adjusters are available with and will subject the piston rod to impact loading. Those two (2) conditions can cause piston rod failure. Internal stroke adjusters should be reviewed with our engineering department.

The piston rod to piston and the stud to piston rod threaded connections are secured with an anaerobic adhesive. The strength of the adhesive decreases with increasing temperature. Cylinders which can be exposed to temperatures above +250°F (+121°C) are to be ordered with a non studded piston rod and a pinned piston to rod joint.

2.3 Cushions – Cushions should be considered for cylinder applications when the piston velocity is expected to be over 4 inches/second. Cylinder cushions are normally designed to absorb the energy of a linear applied load. A rotating mass has considerably more energy than the same mass moving in a linear mode. Cushioning for a rotating mass application should be reviewed by our engineering department.

2.4 Cylinder Mountings – Some cylinder mounting configurations may have certain limitations such as but not limited to minimum stroke for side or foot mounting cylinders or pressure de-ratings for certain mounts. Carefully review the catalog for these types of restrictions.

Always mount cylinders using the largest possible high tensile alloy steel socket head cap screws that can fit in the cylinder mounting holes and torque them to the manufacturer's recommendations for their size.

2.5 Port Fittings – Hydraulic cylinders applied with meter out or deceleration circuits are subject to intensified pressure at piston rod end. The rod end pressure is approximately equal to:

operating pressure x effective cap end area

effective rod end piston area

Contact your connector supplier for the pressure rating of individual connectors.

#### 3.0 Cylinder and Accessories Installation and Mounting

#### 3.1 Installation

**3.1.1** – Cleanliness is an important consideration, and cylinders are shipped with the ports plugged to protect them from contaminants entering the ports. These plugs should not be removed until the piping is to be installed. Before making the connection to the cylinder ports, piping should be thoroughly cleaned to remove all chips or burrs which might have resulted from threading or flaring operations.

**3.1.2** – Cylinders operating in an environment where air drying materials are present such as fast-drying chemicals, paint, or weld splatter, or other hazardous conditions such as excessive heat, should have shields installed to prevent damage to the piston rod and piston rod seals.

# 3.1.3 – Proper alignment of the cylinder piston rod and its mating component on the machine should be checked in both the extended and retracted positions. Improper alignment will result in excessive rod gland and/or cylinder bore wear. On fixed mounting cylinders attaching the piston rod while the rod is retracted will help in achieving proper alignment.

3.1.4 – Sometimes it may be necessary to rotate the piston rod in order to thread the piston rod into the machine member. This operation must always be done with zero pressure being applied to either side of the piston. Failure to follow this procedure may result in lossening the piston to rod-threaded connection. In some rare cases the turning of the piston rod may rotate a threaded piston rod gland and loosen it from the cylinder head. Confirm that this condition is not occurring. If it does, re-tighten the piston rod gland firmly against the cylinder head.

For double rod cylinders it is also important that when attaching or detaching the piston rod from the machine member that the torque be applied to the piston rod end of the cylinder that is directly attaching to the machine member with the opposite end unrestrained. If the design of the machine is such that only the rod end of the cylinder opposite to where the rod attaches to the machine member can be rotated, consult the factory for further instructions.

#### 3.2 Mounting Recommendations

3.2.1 – Always mount cylinders using the largest possible high tensile alloy steel socket head screws that can fit in the cylinder mounting holes and torque them to the manufacturer's recommendations for their size.

**3.2.2** – Side-Mounted Cylinders – In addition to the mounting bolts, cylinders of this type should be equipped with thrust keys or dowel pins located so as to resist the major load.

**3.2.3** – Tie Rod Mounting – Cylinders with tie rod mountings are recommended for applications where mounting space is limited. The standard tie rod extension is shown as BB in dimension tables. Longer or shorter extensions can be supplied. Nuts used for this mounting style should be torqued to the same value as the tie rods for that bore size.

3.2.4 – Flange Mount Cylinders – The controlled diameter of the rod gland extension on head end flange mount cylinders can be used as a pilot to locate the cylinders in relation to the machine. After alignment has been obtained, the flanges may be drilled for pins or dowels to prevent shifting.

**3.2.5** – Trunnion Mountings – Cylinders require lubricated bearing blocks with minimum bearing clearances. Bearing blocks should be carefully aligned and rigidly mounted so the trunnions will not be subjected to bending moments. The rod end should also be pivoted with the pivot pin in line and parallel to axis of the trunnion pins.

3.2.6 – Clevis Mountings – Cylinders should be pivoted at both ends with centerline of pins parallel to each other. After cylinder is mounted, be sure to check to assure that the cylinder is free to swing through its working arc without interference from other machine parts.

#### 4.0 Cylinder and Accessories Maintenance, Troubleshooting and Replacement

**4.1** Storage – At times cylinders are delivered before a customer is ready to install them and must be stored for a period of time. When storage is required the following procedures are recommended.

**4.1.1** – Store the cylinders in an indoor area which has a dry, clean and noncorrosive atmosphere. Take care to protect the cylinder from both internal corrosion and external damage.

4.1.2 – Whenever possible cylinders should be stored in a vertical position (piston rod up). This will minimize corrosion due to possible condensation which could occur inside the cylinder. This will also minimize seal damage.

**4.1.3** – Port protector plugs should be left in the cylinder until the time of installation.

**4.1.5** – When cylinders are mounted on equipment that is stored outside for extended periods, exposed unpainted surfaces, e.g. piston rod, must be coated with a rust-inhibiting compound to prevent corrosion.

#### 4.2 Cylinder Trouble Shooting

#### 4.2.1 - External Leakage

**4.2.1.1** – Rod seal leakage can generally be traced to worn or damaged seals. Examine the piston rod for dents, gouges or score marks, and replace piston rod if surface is rough.

Rod seal leakage could also be traced to gland wear. If clearance is excessive, replace rod bushing and seal. Rod seal leakage can also be traced to seal deterioration. If seals are soft or gummy or brittle, check compatibility of seal material with lubricant used if air cylinder, or operating fluid if hydraulic cylinder. Replace with seal material, which is compatible with these fluids. If the seals are hard or have lost elasticity, it is usually due to exposure to temperatures in excess of 165°F. (+74°C). Shield the cylinder from the heat source to limit temperature to 350°F. (+177°C.) and replace with fluorocarbon seals.

4.2.1.2 – Cylinder body seal leak can generally be traced to loose tie rods. Torque the tie rods to manufacturer's recommendation for that bore size.

Excessive pressure can also result in cylinder body seal leak. Determine maximum pressure to rated limits. Replace seals and retorque tie rods as in paragraph above. Excessive pressure can also result in cylinder body seal leak. Determine if the pressure rating of the cylinder has been exceeded. If so, bring the operating pressure down to the rating of the cylinder and have the tie rods replaced.

Pinched or extruded cylinder body seal will also result in a leak. Replace cylinder body seal and retorque as in paragraph above.

Cylinder body seal leakage due to loss of radial squeeze which shows up in the form of flat spots or due to wear on the O.D. or I.D. – Either of these are symptoms of normal wear due to high cycle rate or length of service. Replace seals as per paragraph above.

#### 4.2.2 – Internal Leakage

**4.2.2.1** – Piston seal leak (by-pass) 1 to 3 cubic inches per minute leakage is considered normal for piston ring construction. Virtually no static leak with lipseal type seals on piston should be expected. Piston seal wear is a usual cause of piston seal leakage. Replace seals as required.

**4.2.2.2** – With lipseal type piston seals excessive back pressure due to over-adjustment of speed control valves could be a direct cause of rapid seal wear. Contamination in a hydraulic system can result in a scored cylinder bore, resulting in rapid seal wear. In either case, replace piston seals as required.

**4.2.2.3** – What appears to be piston seal leak, evidenced by the fact that the cylinder drifts, is not always traceable to the piston. To make sure, it is suggested that one side of the cylinder piston be pressurized and the fluid line at the opposite port be disconnected. Observe leakage. If none is evident, seek the cause of cylinder drift in other component parts in the circuit.

#### 4.2.3 - Cylinder Fails to Move the Load

**4.2.3.1** – Pneumatic or hydraulic pressure is too low. Check the pressure at the cylinder to make sure it is to circuit requirements.

**4.2.3.2** – Piston Seal Leak – Operate the valve to cycle the cylinder and observe fluid flow at valve exhaust ports at end of cylinder stroke. Replace piston seals if flow is excessive.

4.2.3.3-Cylinder is undersized for the load – Replace cylinder with one of a larger bore size.

#### 4.3 Erratic or Chatter Operation

 $\begin{array}{l} \textbf{4.3.1}-\text{Excessive friction at rod gland or piston bearing due to load }\\ \textbf{misalignment}-\text{Correct cylinder-to-load alignment.} \end{array}$ 

**4.3.2** – Cylinder sized too close to load requirements – Reduce load or install larger cylinder.

**4.3.3** – Erratic operation could be traced to the difference between static and kinetic friction. Install speed control valves to provide a back pressure to control the stroke.

4.4 Cylinder Modifications, Repairs, or Failed Component – Cylinders as shipped from the factory are not to be disassembled and or modified. If cylinders require modifications, these modifications must be done at company locations or by the Company's certified facilities. The Industrial Cylinder Division Engineering Department must be notified in the event of a mechanical fracture or permanent deformation of any cylinder component (excluding seals). This includes a broken piston rod, tie rod, mounting accessory or any other cylinder component. The notification should include all operation and application details. This information will be used to provide an engineered repair that will prevent recurrence of the failure.

It is allowed to disassemble cylinders for the purpose of replacing seals or seal assemblies. However, this work must be done by strictly following all the instructions provided with the seal kits.

#### Cylinder Safety Guide

Offer of Sale

### **Offer of Sale**

The items described in this document and other documents and descriptions provided by Parker Hannifin Corporation, Hydraulics Group, and its authorized distributors ("Seller") are hereby offered for sale at prices to be established by Seller. This offer and its acceptance by any customer ("Buyer") shall be governed by all of the following Terms and Conditions. Buyer's order for any item described in its document, when communicated to Seller verbally, or in writing, shall constitute acceptance of this offer. All goods or work described will be referred to as "Products".

 Terms and Conditions. Seller's willingness to offer Products, or accept an order for Products, to or from Buyer is expressly conditioned on Buyer's assent to these Terms and Conditions and to the terms and conditions found on-line at www.parker.com/saleterms/. Seller objects to any contrary or additional term or condition of Buyer's order or any other document issued by Buyer.

2. Price Adjustments; Payments. Prices stated on the reverse side or preceding pages of this document are valid for 30 days. After 30 days, Seller may change prices to reflect any increase in its costs resulting from state, federal or local legislation, price increases from its suppliers, or any change in the rate, charge, or classification of any carrier. The prices stated on the reverse or preceding pages of this document do not include any sales, use, or other taxes unless so stated specifically. Unless otherwise specified by Seller, all prices are F.O.B. Seller's facility, and payment is due 30 days from the date of invoice. After 30 days, Buyer shall pay interest on any unpaid invoices at the rate of 1.5% per month or the maximum allowable rate under applicable law.

3. Delivery Dates; Title and Risk; Shipment. All delivery dates are approximate and Seller shall not be responsible for any damages resulting from any delay. Regardless of the manner of shipment, title to any products and risk of loss or damage shall pass to Buyer upon tender to the carrier at Seller's facility (i.e., when it's on the truck, it's yours). Unless otherwise stated, Seller may exercise its judgment in choosing the carrier and means of delivery. No deferment of shipment at Buyers' request beyond the respective dates indicated will be made except on terms that will indemnify, defend and hold Seller harmless against all loss and additional expense. Buyer shall be responsible for any additional shipping charges incurred by Seller due to Buyer's changes in shipping, product specifications or in accordance with Section 13, herein.

4. Warranty. Seller warrants that the Products sold hereunder shall be free from defects in material or workmanship for a period of eighteen months from the date of delivery to Buyer. The prices charged for Seller's products are based upon the exclusive limited warranty stated above, and upon the following disclaimer: DISCLAIMER OF WARRANTY: THIS WARRANTY COMPRISES THE SOLE AND ENTIRE WARRANTY PERTAINING TO PRODUCTS PROVIDED HEREUNDER SELLER DISCLAIMS ALL OTHER WARRANTES, EXPRESS AND IMPLIED, INCLUDING MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

5. Claims; Commencement of Actions. Buyer shall promptly inspect all Products upon delivery. No claims for shortages will be allowed unless reported to the Seller within 10 days of delivery. No other claims against Seller will be allowed unless asserted in writing within 60 days after delivery or, in the case of an alleged breach of warranty, within 30 days after the date within the warranty period on which the defect is or should have been discovered by Buyer. Any action based upon breach of this agreement or upon any other claim arising out of this sale (other than an action by Seller for any amount due to Seller from Buyer) must be commenced within thirteen months from the date of tender of delivery by Seller or, for a cause of action based upon an alleged breach of warranty, within thirteen months from the date of tender of sould have been discovered by Buyer.

6. LIMITATION OF LIABILITY. UPON NOTIFICATION, SELLER WILL, AT ITS OPTION, REPAIR OR REPLACE A DEFECTIVE PRODUCT, OR REFUND THE PURCHASE PRICE. IN NO EVENT SHALL SELLER BE LIABLE TO BUYER FOR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF, OR AS THE RESULT OF, THE SALE, DELIVERY, NON-DELIVERY, SERVICING, USE OR LOSS OF USE OF THE PRODUCTS OR ANY PART THEREOF, OR FOR ANY CHARGES OR EXPENSES OF ANY NATURE INCLURED WITHOUT SELLER'S WRITTEN CONSENT, EVEN IF SELLER HAS BEEN NEGLIGENT, WHETHER IN CONTRACT, TORT OR OTHER LEGAL THEORY. IN NO EVENT SHALL SELLER'S LIABILITY UNDER ANY CLAIM MADE BY BUYER EXCEED THE PURCHASE PRICE OF THE PRODUCTS.

7. Contingencies. Seller shall not be liable for any default or delay in performance if caused by circumstances beyond the reasonable control of Seller.

8. User Responsibility. The user, through its own analysis and testing, is solely responsible for making the final selection of the system and Product and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application and follow applicable industry standards and Product information. If Seller provides Product or system options, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the Products or systems.

9. Loss to Buyer's Property. Any designs, tools, patterns, materials, drawings, confidential information or equipment furnished by Buyer or any other items which become Buyer's property, may be considered obsolete and may be destroyed by Seller after two consecutive years have elapsed without Buyer placing an order for the items which are manufactured using such property. Seller shall not be responsible for any loss or damage to such property while it is in Seller's possession or control.

10. Special Tooling. A tooling charge may be imposed for any special tooling, including without limitation, dies, fixtures, molds and patterns, acquired to manufacture Products. Such special tooling shall be and remain Seller's property notwithstanding payment of any charges by Buyer. In no event will Buyer acquire any interest in apparatus belonging to Seller which is utilized in the manufacture of the Products, even if such apparatus has been specially converted or adapted for such manufacture and notwithstanding any charges paid by Buyer. Unless otherwise agreed, Seller shall have the right to alter, discard or otherwise dispose of any special tooling or other property its sole discretion at any time. 11. Buyer's Obligation; Rights of Seller. To secure payment of all sums due or otherwise, Seller shall retain a security interest in the goods delivered and this agreement shall be deemed a Security Agreement under the Uniform Commercial Code. Buyer authorizes Seller as its attorney to execute and file on Buyer's behalf all documents Seller deems necessary to perfect its security interest. Seller shall have a security interest in, and lien upon, any property of Buyer in Seller's possession as security for the payment of any amounts owed to Seller by Buyer.

12. Improper Use and Indemnity. Buyer shall indemnify, defend, and hold Seller harmless from any claim, liability, damages, lawsuits, and costs (including attorney fees), whether for personal injury, property damage, patent, trademark or copyright infringement or any other claim, brought by or incurred by Buyer, Buyer's employees, or any other person, arising out of: (a) improper selection, improper application or other misuse of Products purchased by Buyer from Seller; (b) any act or omission, negligent or otherwise, of Buyer; (c) Seller's use of patterns, plans, drawings, or specifications furnished by Buyer to manufacture Product; or (d) Buyer's failure to comply with these terms and conditions. Seller shall not indemnify Buyer under any circumstance except as otherwise provided.

13. Cancellations and Changes. Orders shall not be subject to cancellation or change by Buyer for any reason, except with Seller's written consent and upon terms that will indemnify, defend and hold Seller harmless against all direct, incidental and consequential loss or damage. Seller may change product features, specifications, designs and availability with notice to Buyer.

14. Limitation on Assignment. Buyer may not assign its rights or obligations under this agreement without the prior written consent of Seller.

**15. Entire Agreement.** This agreement contains the entire agreement between the Buyer and Seller and constitutes the final, complete and exclusive expression of the terms of the agreement. All prior or contemporaneous written or oral agreements or negotiations with respect to the subject matter are herein merged.

16. Waiver and Severability. Failure to enforce any provision of this agreement will not waive that provision nor will any such failure prejudice Seller's right to enforce that provision in the future. Invalidation of any provision of this agreement by legislation or other rule of law shall not invalidate any other provision herein. The remaining provisions of this agreement will remain in full force and effect.

**17. Termination.** This agreement may be terminated by Seller for any reason and at any time by giving Buyer thirty (30) days written notice of termination. In addition, Seller may by written notice immediately terminate this agreement for the following: (a) Buyer commits a breach of any provision of this agreement (b) the appointment of a trustee, receiver or custodian for all or any part of Buyer's property (c) the filing of a petition for relief in bankruptcy of the other Party on its own behalf, or by a third party (d) an assignment for the benefit of creditors, or (e) the dissolution or liquidation of the Buyer.

18. Governing Law. This agreement and the sale and delivery of all Products hereunder shall be deemed to have taken place in and shall be governed and construed in accordance with the laws of the State of Ohio, as applicable to contracts executed and wholly performed therein and without regard to conflicts of laws principles. Buyer irrevocably agrees and consents to the exclusive jurisdiction and venue of the courts of Cuyahoga County, Ohio with respect to any dispute, controversy or claim arising out of or relating to this agreement. Disputes between the parties shall not be settled by arbitration unless, after a dispute has arisen, both parties expressly agree in writing to arbitrate the dispute.

19. Indemnity for Infringement of Intellectual Property Rights. Seller shall have no liability for infringement of any patents, trademarks, copyrights, trade dress, trade secrets or similar rights except as provided in this Section. Seller will defend and indemnify Buyer against allegations of infringement of U.S. patents, U.S. trademarks, copyrights, trade dress and trade secrets ("Intellectual Property Rights"). Seller will defend at its expense and will pay the cost of any settlement or damages awarded in an action brought against Buyer based on an allegation that a Product sold pursuant to this Agreement infringes the Intellectual Property Rights of a third party. Seller's obligation to defend and indemnify Buyer is contingent on Buyer notifying Seller within ten (10) days after Buyer becomes aware of such allegations of infringement, and Seller having sole control over the defense of any allegations or actions including all negotiations for settlement or compromise. If a Product is subject to a claim that it infringes the Intellectual Property Rights of a third party, Seller may, at its sole expense and option, procure for make it noninfringing, or offer to accept return of the Product and return the purchase price less a reasonable allowance for depreciation. Notwithstanding the foregoing, Seller shall have no liability for claims of infringement based on information provided by Buyer, or directed to Products delivered hereunder for which the designs are specified in whole or part by Buyer, so lead exclusive liability and Buyer's sole and exclusive remedy for infringement of Intellectual Property Rights.

**20. Taxes.** Unless otherwise indicated, all prices and charges are exclusive of excise, sales, use, property, occupational or like taxes which may be imposed by any taxing authority upon the manufacture, sale or delivery of Products.

21. Equal Opportunity Clause. For the performance of government contracts and where dollar value of the Products exceed \$10,000, the equal employment opportunity clauses in Executive Order 11246, VEVRAA, and 41 C.F.R. §§ 60-1.4(a), 60-741.5(a), and 60-250.4, are hereby incorporated.
