LP Gas Hose – UL 21 Stainless Steel Series 7231

Developed for connections in bulk plant or trucks where piping would be inefficient.

Can be used for natural gas with application specific criteria*. The molecules of natural gas are small, enhancing its ability to permeate through standard rubber or PVC hose constructions. The permeation process is more rapid as the working pressure increases. Use pipe, non-permeable tubing or hose with barrier constructions to convey natural gas. Series 7231 LP Gas hose can be used for natural gas service, but **ONLY** under the following conditions:

***Maximum** working pressure of the application not to exceed 50 PSI.

The application **must** be in an outside (non-enclosed) environment.

Applications that are in an enclosed environment or greater than 50 PSI working pressure **are not recommended**.

Do not use LPG hose for fuel hose in vehicles using CNG (Compressed Natural Gas).
