Hose Products Connection Letter

To: FCG Field Sales, Distribution
Date: June 1, 2015
Subject: Clean Seal Launch

Parker Hannifin's Hose Products Division is proud to introduce a simple, easy and clean alternative to cap your hose and fitting assemblies.

Clean Seal offers an innovative and economical solution to protect cleaned hoses. The Clean Seal cap enables a secure fit due to an easy to use heat shrink system. Also, reduce your cap complexity as one Clean Seal cap will seal multiple end configurations and sizes, eliminating many unique traditional caps.

Furthermore, the Clean Seal process utilizes heat shrink technology that eliminates problems due to re-contamination issues. When traditional caps and plugs are forced onto assemblies, plastic debris and particles shred off into your hose, ultimately causing re-contamination.

Product Features:

- For use on fittings up to -24 (1 1/2")
- Fits straight and elbow fittings
- Easy pull tab removal
- Reduced environmental impact compared to traditional caps
 - Less plastic used
 - More crushable
- Multiple hoses can be capped at one time
- Caps sold in bulk cartons or packaged quantities

Clean Seal bulletins are in stock at TMR, part number BUL. 4480-B180. Please contact your HPD Product Sales Manager or Customer Service Correspondent for additional information.

Thank you for your support and business.
