SHM

SHM Series **Metric Hydraulic Cylinders**

As a world leader in the design and manufacture of pneumatic and hydraulic cylinders, Schrader Bellows Industrial Cylinder Division offers the SHM Series metric hydraulic cylinder. Schrader Bellows' SHM Series cylinders are designed to meet the requirements of ISO 6020/2 (1991), 160 Bar Compact Series. SHM Series cylinders may be used for working pressures up to 210 Bar.

Schrader Bellows SHM Series cylinders are the true *world standard*, available all over the globe from worldwide manufacturing facilities.

Introduction

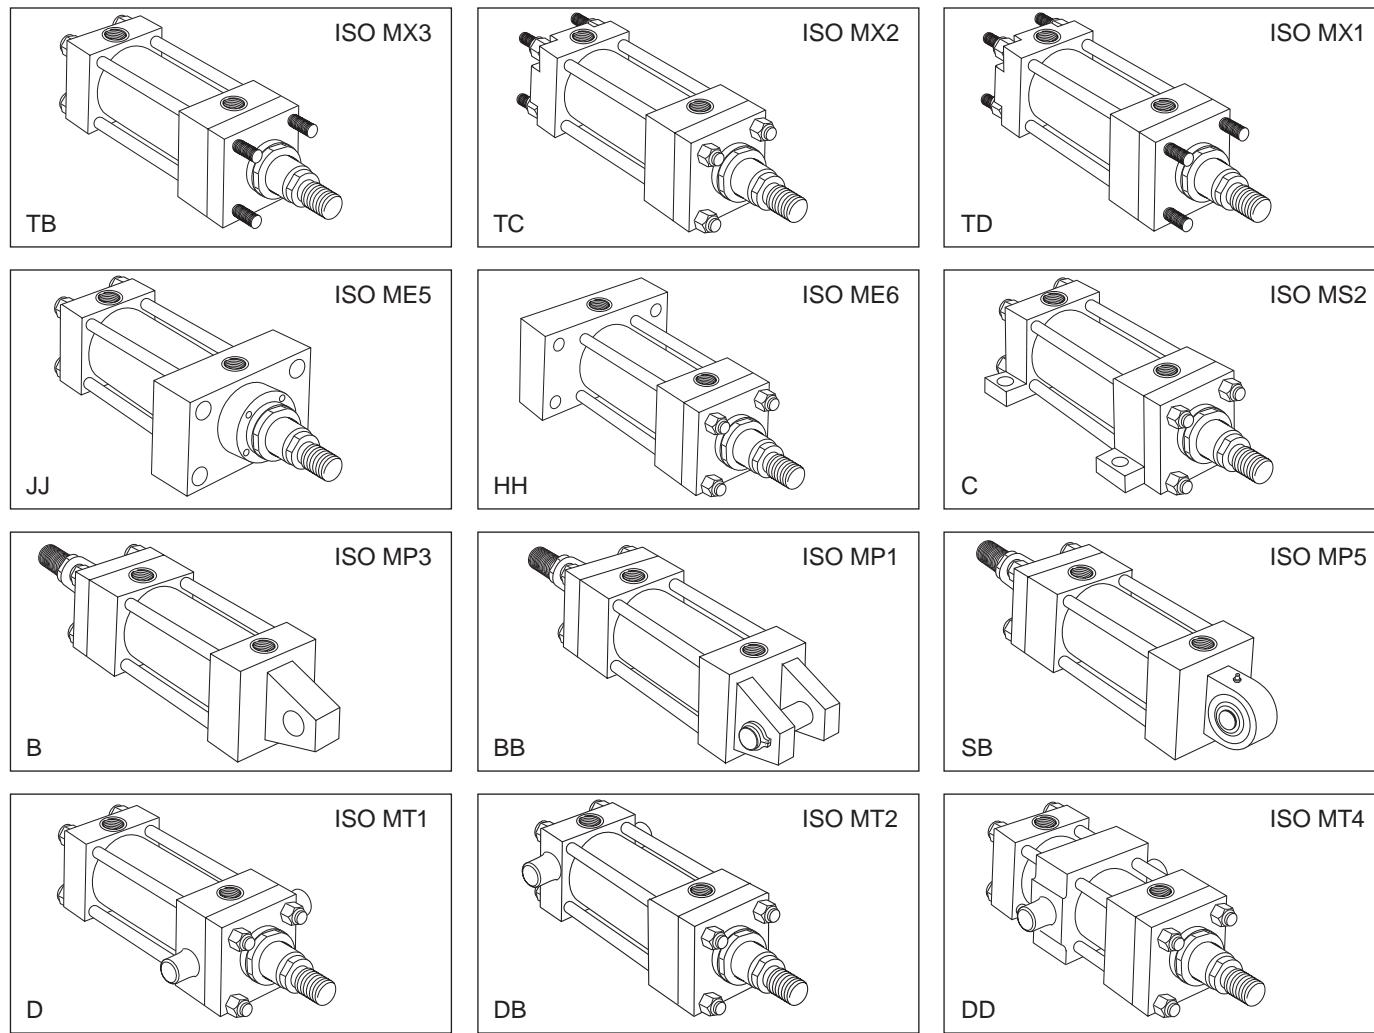

The SHM Series cylinders described in this catalog are Compact Series cylinders to ISO 6020/2 rated for use at working pressures up to 210 bar. They have been designed to satisfy the requirements of a wide range of industries in which cylinders to ISO standards are specified.

In addition to the standard cylinders featured in this catalog, SHM cylinders can be designed to suit customer requirements. Our engineers will be pleased to advise on unique designs to suit specific applications.

SHM Series Standard Features and Specifications

- ISO 6020/2 mounting interchangeable
- 12 standard mounting styles
- Up to 3 rod sizes per bore
- Wide range of mounting accessories
- Up to 3 male and 3 female rod end threads per bore
- Bore sizes – 25mm to 200mm
- Strokes – available in any practical stroke length
- Working pressure up to 210 bar
- Piston rods – 12mm to 140mm
- Single and Double rod designs
- Cushions available at either or both ends
- Temperature Range – -20°C to +150°C depending on seal type
- Seal types to suit a wide variety of operating environments

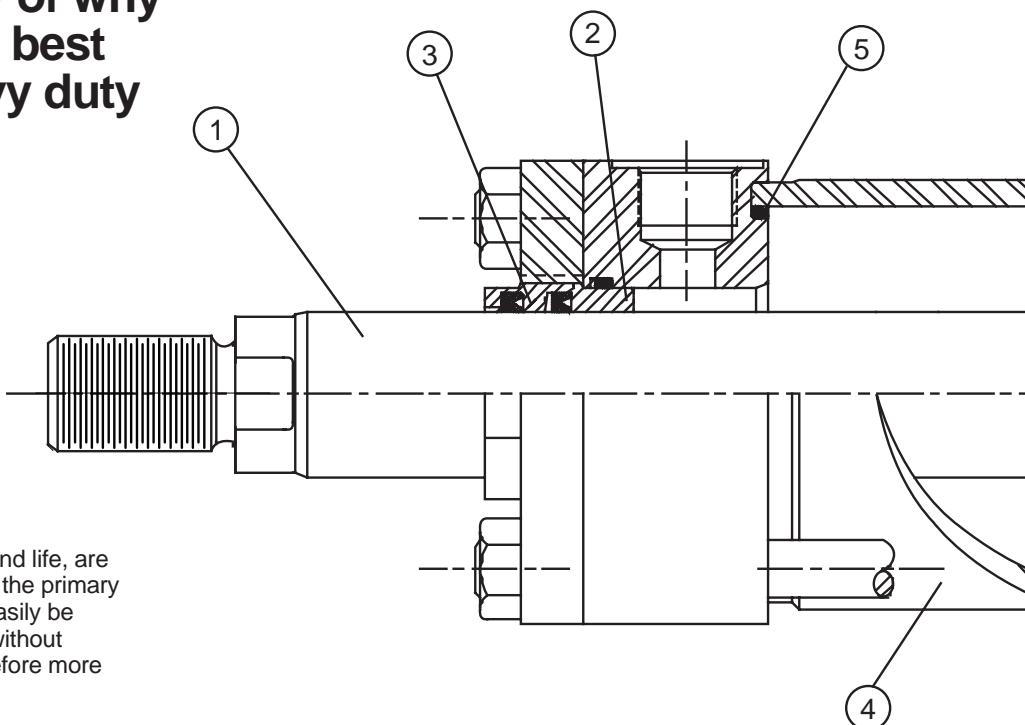

In line with our policy of continuing product improvement, specifications in this catalog are subject to change.

Here is the inside story of why the SHM Series is your best choice in a metric heavy duty hydraulic cylinder...

1 Piston Rod

Gland seal life is maximized by manufacturing piston rods from precision ground, high tensile carbon steel, hard chrome plated and polished to $0.2\mu\text{m}$ max. Piston rods are induction case hardened to Rockwell C54 minimum before chrome plating, resulting in a dent-resistant surface.

2 Schrader Bellows 'Quick' Gland

Continuous lubrication, and therefore longer gland life, are provided by the long bearing surface inboard of the primary seal. The gland, complete with rod seals, can easily be removed without dismantling the cylinder and without special tools, so servicing is quicker – and therefore more economical.

3 Rod Seals

The Tuff Seal primary seal has a series of sealing edges which take over successively as pressure increases, providing efficient sealing under all operating conditions. On the return stroke the serrations act as a check valve, allowing the oil adhering to the rod to pass back into the cylinder.

The double lip wiperseal acts as a secondary seal, trapping excess lubricating film in the chamber between the wiper and lip seals. Its outer lip prevents the ingress of dirt into the cylinder, extending the life of gland and seals.

The Tuff Seal is manufactured from an enhanced poly-urethane, giving efficient retention of pressurized fluid and long service life.

4 Cylinder Body

Strict quality control standards and precision manufacture ensure that all tubes meet rigid standards of straightness, roundness and surface finish. The steel tubing is surface finished to minimize internal friction and prolong seal life.

5 Cylinder Body Seals

To make sure that the cylinder body remains leak-free, even under pressure shock conditions, Schrader Bellows utilizes pressure-energized body seals.

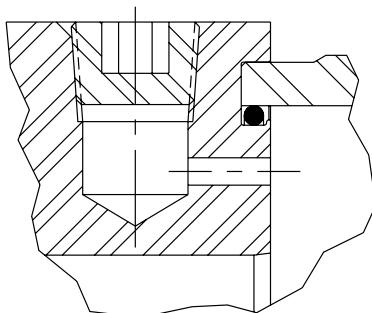

6 One-Piece Piston

Side loading is resisted by wear rings on the piston. A long thread engagement secures the piston to the piston rod and, as an added feature, pistons are secured by an anaerobic adhesive.

Optional

Air Bleeds

Available as an option at both ends, the air bleeds are recessed into the head and cap.

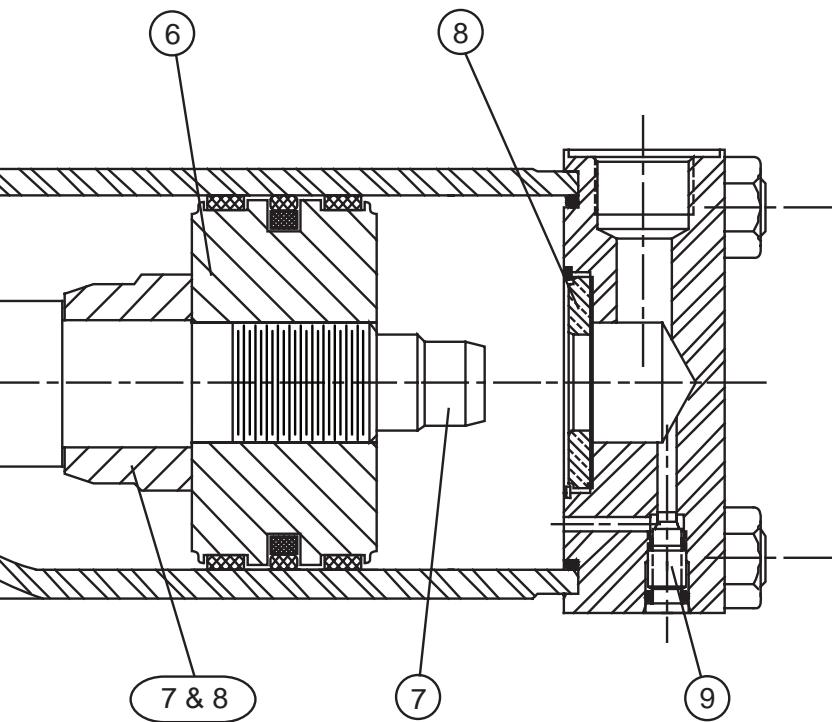

Servo Cylinders

Servo cylinders permit fine control of acceleration, velocity and position in applications where very low friction and an absence of stick-slip are required. They may be used in conjunction with integral or external transducers. Servo cylinders combine low friction piston and gland seals with specially selected tubes and rods. For low-friction applications – consult factory.

Seal Classes

To accommodate the many types of fluids and the varying temperature ranges used in industry, Schrader Bellows offers a range of rod gland, piston and body seals.

7 Cushioning

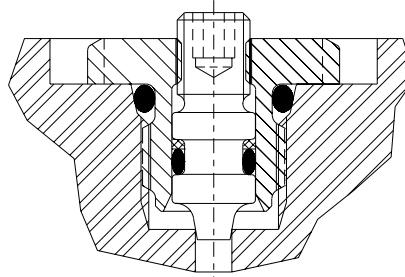

Progressive deceleration is available by using profiled cushions at the head and cap. The head end cushion is self aligning, while the polished cap end spear is an integral part of the piston rod.

8 Floating Cushion Bushings and Sleeves

Closer tolerances – and therefore more effective cushioning – are permitted by the use of a floating cushion sleeve at the head end of the cylinder, and a floating cushion bushing at the cap end. A slotted cushion sleeve on the head end, and the floating bronze cushion bushing in the cap, provide minimum fluid restriction at the start of the return stroke. This allows full pressure to be applied over the entire area of the piston, providing full power and fast cycle times.

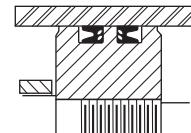

9 Cushion Adjustment

Needle valves are provided at both ends of the cylinder for precise cushion adjustment.

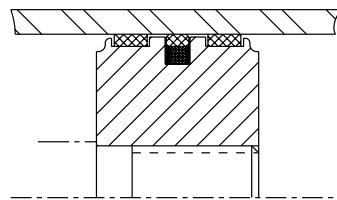

10 Piston Seals

Standard on 25mm, 32mm and 40mm bore sizes, Schrader's Lipseal™ Piston provides zero leakage under static conditions for hydraulic pressures up to 3000 psi. Seals are self-compensating to conform to variations in pressure, mechanical deflection, and wear. Back-up washers prevent extrusion.

Standard on 50mm bore sizes and larger, Schrader's B style piston is a single seal design which incorporates two wear strips. This design provides smooth operation, long bearing life, and high load carrying capacity.

Mixed Media Piston Seals

For applications requiring different media on either side of the piston specify Mixed Media Piston Seals with a W piston code. This option is ideal when hydraulic oil is on one side of the piston and air on the opposite side; and it can be equally effective when dissimilar fluids are on either side of the piston. Superior low-friction bi-directional sealing is accomplished by combining an energized filled PTFE seal with a redundant elastomer seal.

CHE/CHD

Gland Drains

The accumulation of fluid behind the gland wiperseal of long stroke cylinders, or cylinders with constant back pressure, can be relieved by specifying the option of a gland drain. A port between the wiperseal and primary seal allows fluid to be piped back to a reservoir. By fitting a transparent tube between the port and the reservoir, fluid loss from concealed or inaccessible cylinders can be monitored to provide an early indication of the need for gland servicing.

ISO Cylinder Mounting Styles

The standard range of Schrader Bellows SHM Series cylinders comprises 12 ISO mounting styles, to suit the majority of applications. General guidance for the selection of ISO cylinders is given below, with dimensional information about each mounting style shown on the following pages. Application-specific mounting information is shown in the Mounting Information section of this catalog.

Extended Tie Rods

Cylinders with TB, TC and TD mountings are suitable for straight line force transfer applications, and are particularly useful where space is limited. For compression (push) applications, cap end tie rod mountings are most appropriate; where the major load places the piston rod in tension (pull applications), head end mounting styles should be specified. Cylinders with tie rods extended at both ends may be attached to the machine member from either end, allowing the free end of the cylinder to support a bracket or switch.

Flange Mounted Cylinders

These cylinders are also suitable for use on straight line force transfer applications. Two flange mounting styles are available, offering either a head flange (JJ) or a cap flange (HH). Selection of the correct flange mounting style depends on whether the major force applied to the load will result in compression (push) or tension (pull) stresses on the piston rod. For compression-type applications, the cap mounting style is most appropriate; where the major load places the piston rod in tension, a head mounting should be specified.

Foot Mounted Cylinders

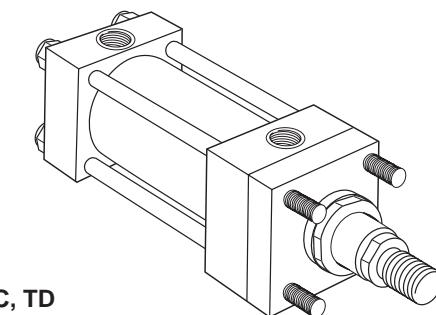

Style C, foot mounted cylinders do not absorb forces on their centerline. As a result, the application of force by the cylinder produces a moment which attempts to rotate the cylinder about its mounting bolts. It is important, therefore, that the cylinder should be firmly secured to the mounting surface and that the load should be effectively guided to avoid side loads being applied to rod gland and piston bearings. A thrust key modification may be specified to provide positive cylinder location.

Pivot Mountings

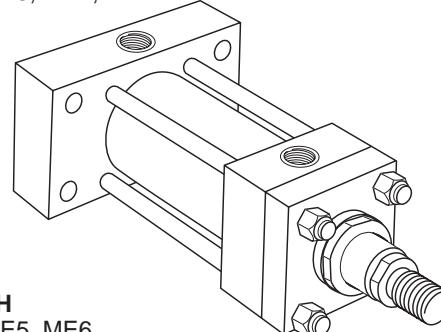

Cylinders with pivot mountings, which absorb forces on their centerlines, should be used where the machine member to be moved travels in a curved path. Pivot mountings may be used for tension (pull) or compression (push) applications. Cylinders using a fixed clevis, styles BB and B, may be used if the curved path of the piston rod travel is in a single plane; for applications where the piston rod will travel in a path on either side of the true plane of motion, a spherical bearing mounting SB is recommended.

Trunnion Mounted Cylinders

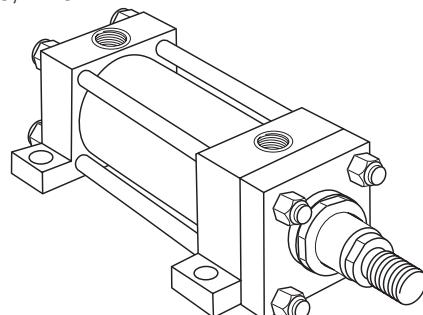

These cylinders, styles D, DB and DD, are designed to absorb force on their centerlines. They are suitable for tension (pull) or compression (push) applications, and may be used where the machine member to be moved travels in a curved path in a single plane. Trunnion pins are designed for shear loads only and should be subjected to minimum bending stresses.

All dimensions are in millimeters unless otherwise stated.

Thread Styles 4 & 7

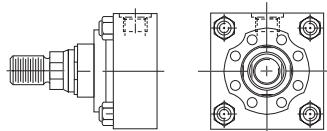

The smallest diameter rod end thread for each bore size is designated Style 4 when supplied with a No. 1 rod. When the same rod end thread is supplied with a No. 2 or No. 3 rod, it is designated Style 7.

25 & 32mm Bore Cylinders

5mm extra height applies to port face at head end only.

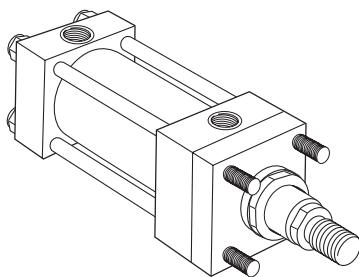

**Gland Retainer –
160 and 200mm Bore**

On all 160mm and 200mm bore ISO mounting styles except TB and TD, the gland retainer is separately bolted to the head, as shown.

All dimensions are in millimeters unless otherwise stated.

Trunnion Mountings**Metric Hydraulic Cylinders
SHM Series**

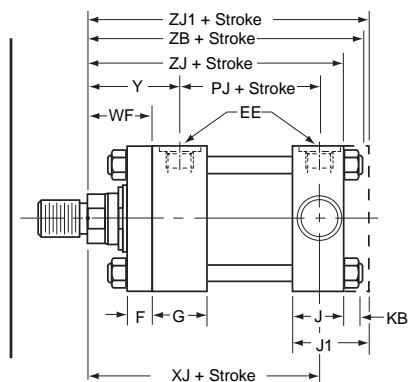

Style D
Head Trunnion
(ISO Style MT1)

**Notes:**

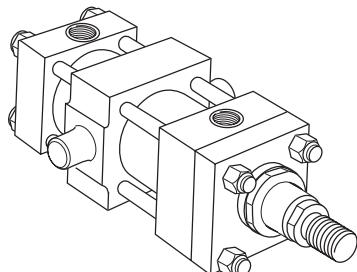

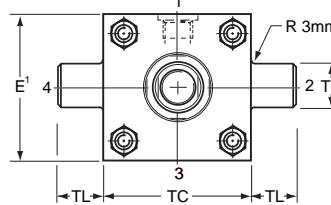

A one-piece head and retainer is used on 100mm-200mm bore sizes – G1 dimension. On 160 and 200mm bores, the bolted gland is recessed, with tie rods screwed into the head.

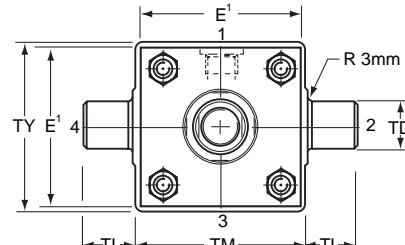

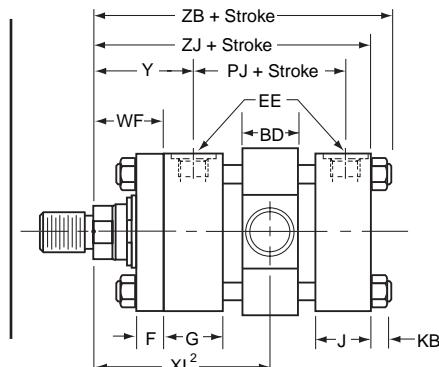

Style DB
Cap Trunnion
(ISO Style MT2)

**Note:**

On 80-200mm bore cylinders, dimension J becomes J1. ZJ1 replaces ZB, and tie rods are screwed directly into the cap.

Style DD
Intermediate Fixed Trunnion
(ISO Style MT4)

¹Head depth increased by 5mm to accommodate port on 25mm and 32mm bore cylinders – see 25 & 32mm Bore Head data page.

²Dimensions to be specified by customer. See table below for minimum XI dimensions and minimum cylinder stroke.

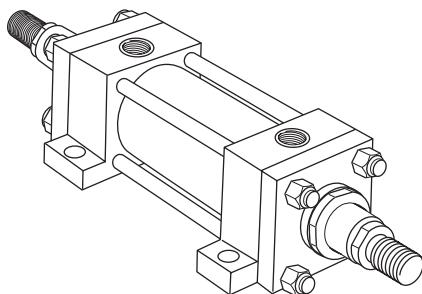

Dimensions – D, DB & DD See also Rod End Dimensions and Mounting Information.

**Double Rod Cylinder**

Available with Styles TB, TD, JJ, C, D, DD (Style C illustrated)

**Mounting Styles and Codes**

Double rod cylinders are denoted by a 'K' in the ISO cylinder model code.

Dimensions

To obtain dimensional information for double rod cylinders, first select the desired mounting style by referring to the corresponding single rod model. Dimensions for the appropriate single rod model should be supplemented by those from the table opposite to provide a full set of dimensions.

Minimum Stroke Length – Style 9 Rod End

Where a style 9 (female) piston rod end is required on a double rod cylinder with a stroke of 80mm or less, and a bore of 80mm or above, please consult the factory.

Cushioning

Double rod cylinders can be supplied with cushions at either or both ends. Cushioning requirements should be specified by inserting a 'C' in the ordering code. See How To Order page of this section.

Double Rod Cylinders

For double rod cylinders, specify rod number and rod end symbols for both piston rods. A typical model number for a double rod cylinder would be:

| | | | | | | | | | | | | | | | |

| | 3 | 110 | | | | |

All dimensions are in millimeters unless otherwise stated.

Accessory Selection

Accessories for the rod end of a cylinder are selected by reference to the rod end thread, while the same accessories, when used at the cap end, are selected by cylinder bore size. See tables of part numbers below, and on the following pages.

The rod clevises, plain rod eyes and spherical bearings fitted as accessories to the rod end have the same pin diameters as those used at the cylinder cap ends of the corresponding mounting styles – B, BB and SB – when fitted with the No. 1 rod, or the No. 2 or No. 3 rods with Style 7 rod end.

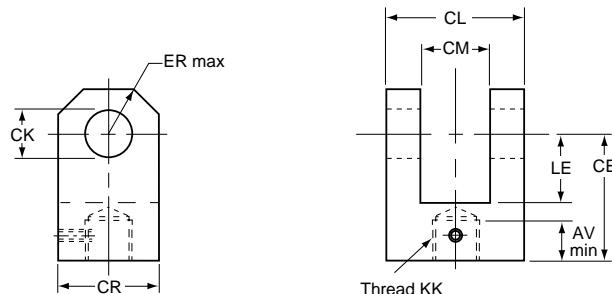

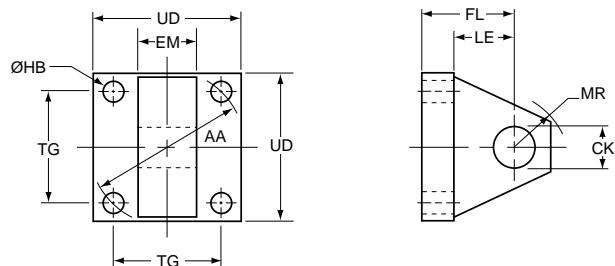

Rod and Cap End Accessories

Accessories for the SHM ISO cylinder include:

- Rod End** – rod clevis, eye bracket and pivot pin
 – plain rod eye, clevis bracket and pivot pin
 – rod eye with spherical bearing
- Cap End** – eye bracket for style BB mounting
 – clevis bracket for style B mounting
 – pivot pin for eye bracket and clevis bracket

Rod Eye with Spherical Bearing

All spherical bearings should be re-packed with grease when servicing. In unusual or severe working conditions, consult the factory regarding the suitability of the bearing chosen.

Mounting Bracket and Pivot Pin

All dimensions are in millimeters unless otherwise stated.

How to Order ISO Cylinders

Data Required On All Cylinder Orders

When ordering SHM Series cylinders, be sure to specify each of the following requirements:

(NOTE: – Duplicate cylinders can be ordered by giving the SERIAL NUMBER from the nameplate of the original cylinder. Factory records supply a quick, positive identification.)

a) Bore Size

b) Mounting Style

Specify your choice of mounting style – as shown and dimensioned in this catalog. If double rod is required, specify “with double rod.”

c) Series Designation (“SHM”)

d) Length of Stroke

e) Piston Rod Diameter

Call out rod diameter or rod code number. In SHM Series cylinders, standard rod diameters (Code No. 1) will be furnished if not otherwise specified, unless length of stroke makes the application questionable.

f) Piston Rod End Thread Style

Call out thread style number or specify dimensions. Thread style number 4 will be furnished if not otherwise specified.

g) Cushions (if required)

Specify “Cushion-head end,” “Cushion-cap end” or “Cushion-both ends” as required. If cylinder is to have a double rod and only one cushion is required, be sure to specify clearly which end of the cylinder is to be cushioned.

h) Piston

Schrader Bellows B style pistons are standard. Fluorocarbon also available.

i) Ports

BSP (ISO 228) are standard.

j) Fluid Medium

SHM Series hydraulic cylinders are equipped with seals for use with hydraulic oil. If other than hydraulic oil will be used, consult factory.

ADDITIONAL DATA is required on orders for cylinders with special modifications.

For further information, consult factory.

Service Policy

On cylinders returned to the factory for repairs, it is standard policy for the Industrial Cylinder Division to make such part replacements as will put the cylinder in as good as new condition. Should the condition of the returned cylinder be such that expenses for repair would exceed the costs of a new one, you will be notified.

Address all correspondence to Service Department at your nearest regional plant listed in the pages of this catalog.

SHM Series Model Numbers – How to Develop and “Decode” Them

Schrader Bellows SHM Series cylinders can be completely and accurately described by a model number consisting of coded symbols. For single rod cylinders a maximum of 17 places for digits and letters are used in a prescribed sequence to produce a model number. Only twelve places are needed

to completely describe a standard noncushioned SHM Series cylinder. To develop a model number, select only those symbols that represent the cylinder required, and place them in the sequence indicated below.

| Feature | Description | Symbol | Example |
|--------------------------------|---|---|---|
