SMT pump series / Serie SMT

Three screw pumps

Three screw pumps represent the largest class of multiple screw pumps in service today. No matter the applications and the environmental conditions, three screw pump is the most flexible pump on the market.

Well known to be very reliable, at reasonable cost, virtually pulsation-free flow, very low acoustic emissions, three screw pumps are extensively used in meeting the requirements of oil & gas, chemical, marine, industrial, mobile, alternative energy, food processing, paper, power gen, pharmaceutical and many other industries.

SMT three screw pumps represent one of the most used pump series all over the world after thirty five years of experience.

Le pompe a tre viti

Le pompe a tre viti, oggi, rappresentano la classe di pompe a viti maggiormente utilizzate, indipendentemente dal tipo di applicazione e dalle condizioni ambientali, in quanto sono le più flessibili sul mercato. Sono considerate le più affidabili, a prezzi ragionevoli, e raggiungono bassissimi livelli di emissioni acustiche e assenza di vibrazioni nella trasmissione del flusso. Le pompe a tre viti sono ampiamente utilizzate in quanto rispettano i requisiti di settori quali oil & gas, chimico, navale, mobile, agroalimentare, power generation ed energie alternative, industria della carta, industria farmaceutica e molte altre.

*Le pompe a tre viti della serie **SMT**, sono tra le più usate in tutto il mondo e vantano oltre trent'anni di esperienza.*

No pulsation – smooth flow. Low noise

SMT three screw pumps are designed to avoid any pulsation, to ensure a smooth operation and to reduce to the lowest level the acoustic emissions reducing all costs of second noise reduction measures.

The pulsation-free flow of **SMT** pumps allows Settima screw pumps also in output condition management critical to applications such as precision hydraulic controls and fuel metering.

Flusso omogeneo – Nessuna pulsazione. Basse emissioni acustiche

*Le pompe a tre viti della serie **SMT** sono progettate per eliminare le pulsazioni, assicurare un funzionamento omogeneo e ridurre al minimo le emissioni acustiche, riducendo in questo modo i costi legati alla necessità di ricorrere a misure secondarie per la riduzione del rumore.*

*Il flusso privo di pulsazioni delle pompe **SMT**, permette l'applicazione delle pompe Settima anche in condizioni critiche, come ad esempio idraulica di precisione, dosaggio e misurazione di carburanti.*

Magnetic coupling sealless leakage free pumps - FGM option

SMT pump can be equipped with a magnetic coupling if required. The hermetically sealed magnetic coupling is a permanent magnetic synchronous coupling able to transmit torque through magnetic forces between the internal and external rotor. Applying a magnetic coupling, the drive and the driven sides are hermetically separated. In case of critical media the magnetic coupling is a reliable seal and avoids any serious leaking. The magnetic coupling is the containment shroud that is fixed to the driven sided power unit and separates internal and external rotor from each other. Due to the absence of mechanical connection the vibrations torque transmission are very low, with completely leak-proof separation of product and atmosphere.

The magnetic coupling is used to ensure no media leaking or when working in environments with potentially explosive atmospheres.

Giunto magnetico senza tenute rotanti assenza di perdite garantita - Opzione FGM

*Le pompe **SMT** possono, su richiesta, essere dotate di giunto magnetico. Il giunto magnetico permette di sigillare l'accoppiamento che trasmette la coppia tra il rotore interno ed esterno tramite forza magnetica. Con l'applicazione del giunto magnetico, l'elemento di trasmissione e quello condotto sono ermeticamente separati. In caso di fluidi pericolosi, il giunto magnetico garantisce una tenuta affidabile che impedisce perdite. Il giunto magnetico consiste nella copertura fissata sull'elemento condotto che separa il rotore interno da quello esterno. Grazie all'assenza di connessioni meccaniche, le vibrazioni dovute alla trasmissione di potenza sono molto ridotte, senza possibilità di contaminazione dell'atmosfera da parte del fluido e viceversa. Il giunto magnetico è utilizzato per prevenire in modo sicuro perdite*

* Others materials available upon request. Altri materiali disponibili su richiesta.

Applications / Applicazioni

INDUSTRIAL LUBE SERVICES

Power hydraulics (presses, machine tools, working machines rolling mill, dumping equipment, elevators, variable pitch propellers, hydraulic winches)
Power unit & mini power packs
Injection molding machinery (cooling & filtration systems)
Hydraulic governors
Cooling, heating, recycling
Driving and filtering
Process technology and chemistry

High pressure coolant fuel oil handling
Filtration applications
Chip conveyors
Turbine lubrication and oil jacking
Hydro power (turbines & compressor lubrication power)
Paper & Pulp (lubrication & filtration)
Gear box lube and filtration system (high viscosity lube, air emulsion, heavy duty applications)

POWER GENERATION

Lube oil service
Control oil service
Turbine shaft jacking service
Sealing oil service for gas turbine
Fuel unloading station
Fuel transfer
Fuel feeding
Burner operations service
Filtration & cooling

MARINE

Off-line filtration
Off-line filtration cart and trolleys
Filtration & oil transfer
Fuel service
Lube oil circulation service
Lubricating liquids (machines, turbines, gear sets, motors)

WIND MILLS

Cooling systems
Hydraulic pitch control and yaw control
Forced lubrication systems

OIL & GAS

Oil filtration & cooling , oil and fuel oil lubrication
Oil rigs, refineries (transport, meter and mix), off-shore platform
Petrochemical industry, transfer service.

Suction and drain configuration / Configurazioni aspiraz. e drenaggio

Suction and drain hole configuration available as per table below (orientations relative to pressure port).
 Configurazioni di porte di aspirazione, mandata e drenaggio. Vedi tabella sotto.

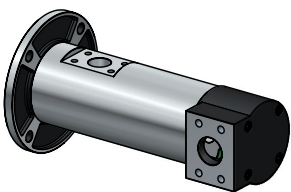

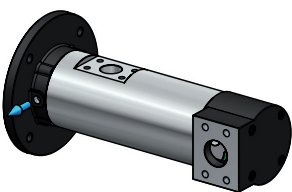

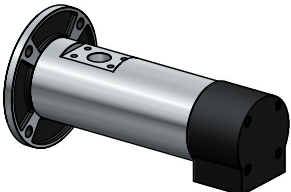

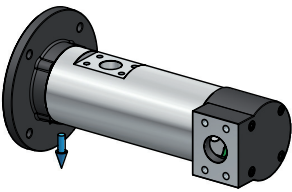

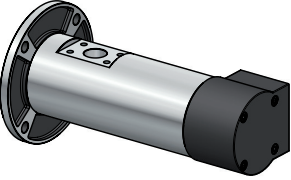

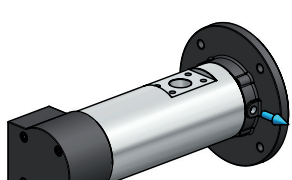

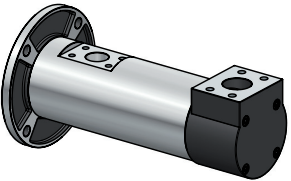

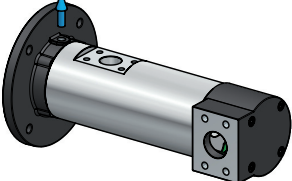

Standard configuration / Configurazioni standard

Standard configuration: T1 – D2

Configurazione standard: T1 – D2

Standard configuration for pumps WITH RP VALVE: T4 – D2

Configurazione standard per pompa CON VALVOLA RP: T4 – D2

SUCTION CONFIGURATION CODES / CODICI CONFIGURAZIONE ASPIRAZIONE		DRAIN CONFIGURATION CODES / CODICI CONFIGURAZIONE DRENAGGIO	
	T1		D1
	T2		D2
	T3		D3
	T4		D4

Settima recommends that in case of request of pump with RP valve (external variable regulation valve), it is necessary to choose very carefully the suction and drain configuration. Once the external valve is built on the pump it will be not possible any change of both configurations.

Settima raccomanda di scegliere attentamente la configurazione delle porte nel caso di pompa con valvola RP (valvola regolazione variabile esterna). La valvola RP impedisce di modificare l'orientamento delle porte una volta installata sulla pompa.

Motor pump selection / Selezione motore

Please check the table below to select the right motor.

Controllare la tabella per selezionare il motore adatto.
